

Just think...

“The concept of using individual student attention to adapt instruction is at the very foundation of personalized learning.”

– Amy Perry-DelCorvo, EdD, CEO & Executive Director, NY State for Computers & Technology in Education

If there were a better way to focus, would you learn more, remember more and stay more engaged?

At NERVANIX, we start with a simple premise: An attentive learner is an engaged learner, and an engaged learner achieves academic success.

NERVANIX is an exciting company in the educational technology sector that applies the groundbreaking advances in the field of neuroscience to improve attention and focus in order to optimize student engagement and achievement. We strive to improve the efficiency and effectiveness of instructional learning models by applying the concept of **Attention Adaptivity™** to the pedagogy of teaching and learning.

Using state-of-the-art EEG technology, NERVANIX measures attention levels of learners, both in real time as well as longitudinally, and uses that information to enable:

- ▶ Learners to self-monitor their studying and learning.
- ▶ Teachers to adapt their teaching methods to effectively reach struggling learners.
- ▶ Digital learning applications to adapt to the individual learner.
- ▶ Learning platforms to align and match appropriate learning objects to individual learners based upon attention profiles.
- ▶ Publishers to optimize their products for maximum engagement.

Just think...

“Nervanix solutions help to combat the ‘illusion of knowing’ that often impedes more efficient instruction and learning.”

– Steve Miller, PhD, co-founder,
Scientific Learning

NERVANIX develops solutions that:

- ▶ Personalize instruction based upon how a learner is thinking, not what he or she is saying or doing.
- ▶ Give instructors a powerful view into the mind of the learner, opening up creative ways to effectively engage.
- ▶ Give parents real time, instant feedback around what’s working and what’s not: No more waiting for test scores and report cards.
- ▶ Provide school administrators with a profoundly better understanding of what kind of resources work for different students based on how the learner thinks, rather than on demographics, tests or surveys.
- ▶ Provide analytics to publishers of instructional materials on the effectiveness of various products to elicit attention and engagement.

At NERVANIX, our goal is to help you guide your students towards academic success.
