short	under 3'
medium	3'-5'
tall	over 5'

Fragrance

*	Slight, mild
**	medium
***	heavy, strong
- or blank	is no fragrance

bold = new variety

Planting Roses

Like any container grown plant you want to amend your planting hole with 1/3 to 1/2 planting mix to aid the roots' transition to the existing ground soil. We recommend Master Nursery Rose Planting Mix for ground planting and Gardener's Gold Potting Soil for container planting. Also use Master Start fertilizer or Dr. Earth Starter Fertilizer when planting. It will encourage better root and bloom development.

Feeding Roses

Through the growing season, Roses are heavy feeders, so we recommend feeding regularly with one of our quality rose fertilizers. Supplement your fertilizer two times a year with an application of EB Stone Alfalfa Meal and EB Stone Sul-Po-Mag. These additions will give you bigger and better colored flowers by correcting pH problems, adding trace elements and stimulating blooming. With a little help, your roses will provide loads of blooms for you all season long.

Pruning and Spraying Roses

Pruning roses in January and following up with a dormant spray of copper is recommended. If spraying during the growing season please see us for the current earth friendly product that best suits your need.
