

HPLART™

ACOUSTIC WALL & CEILING PANELS

"The aim of art is to represent not the outward appearance of things, but their inward significance."¹

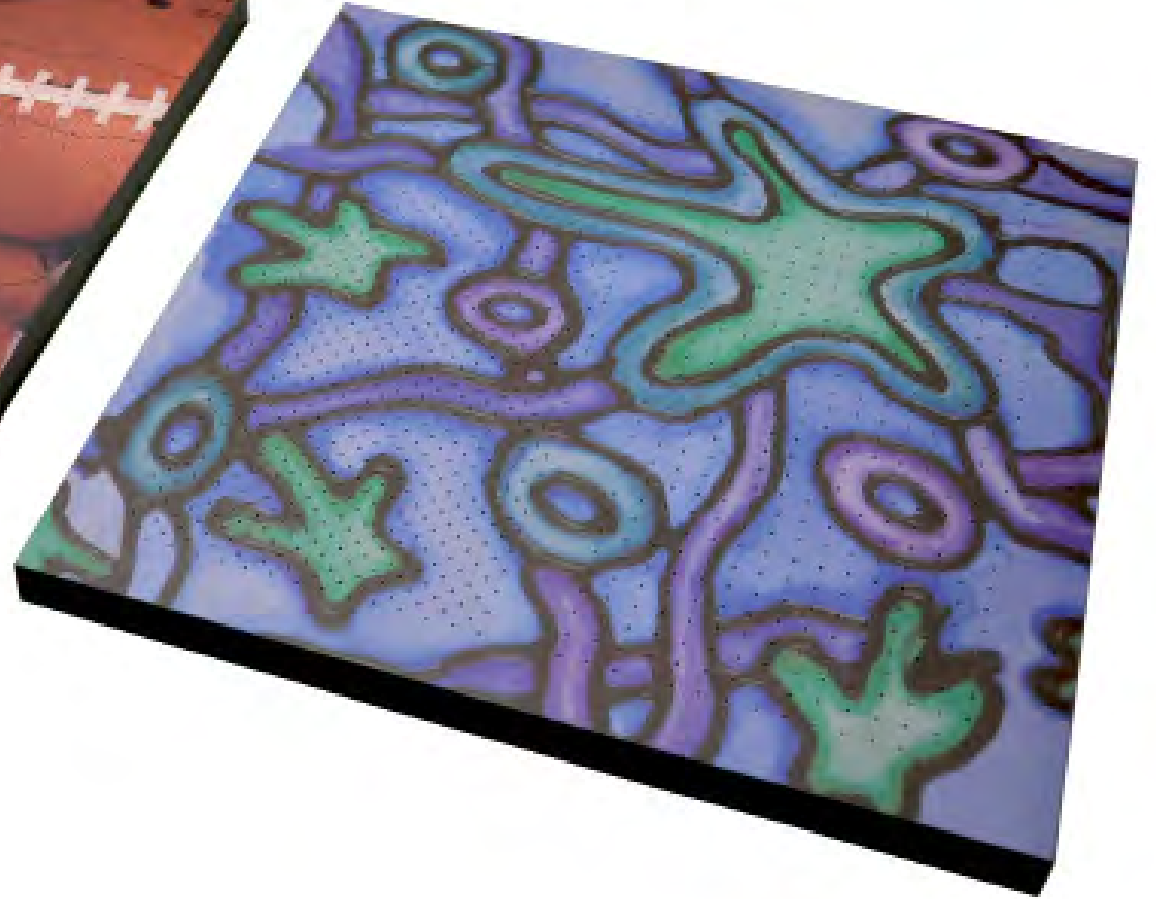

eomac's wide range of acoustic panels can be finished in printed high pressure laminate. HPLART™ turns stunning photos and artworks into superior acoustic wall or ceiling panels.

Please also see the VIBRANT™ model, available online at eomac.com.

The panels absorb sound energy through various standard and custom groove or perforation patterns. Each panel type has been independently tested to verify acoustic performance - NRC values as high as 0.80.

¹Quote by Aristotle (384-322 BCE), Philosopher / Scientist

Samples shown:

Micro perforation of $\text{Ø}1.5$ mm

Centre-to-centre 8 mm, NRC: 0.75
