

# Twitter in Nurse Education

Pam Nelmes

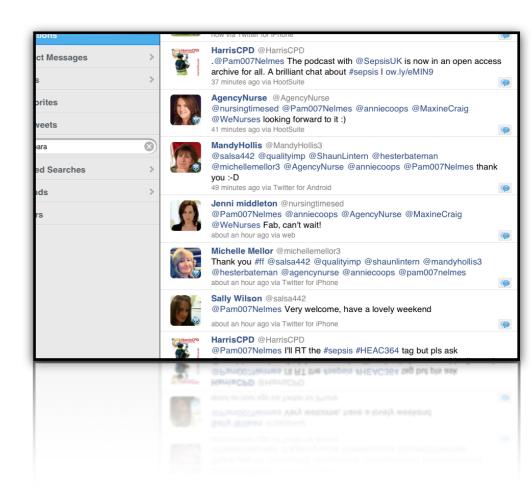

October 2012

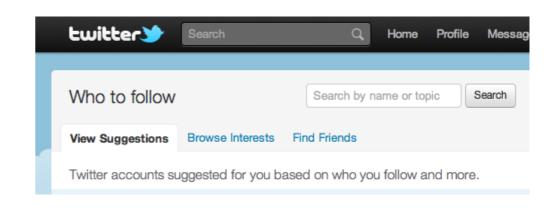

# Twitter in Higher Education

- Students study beyond the physical 'space' of academic institutions
- Lifestyle, technology and a disruptive economy influence learner expectations
- 'Anytime, anyplace, anywhere' attitude to information accessibility (Blackboard, 2010)
- Social networking is a social structure enabling connectivity and relationships between people - learning is social

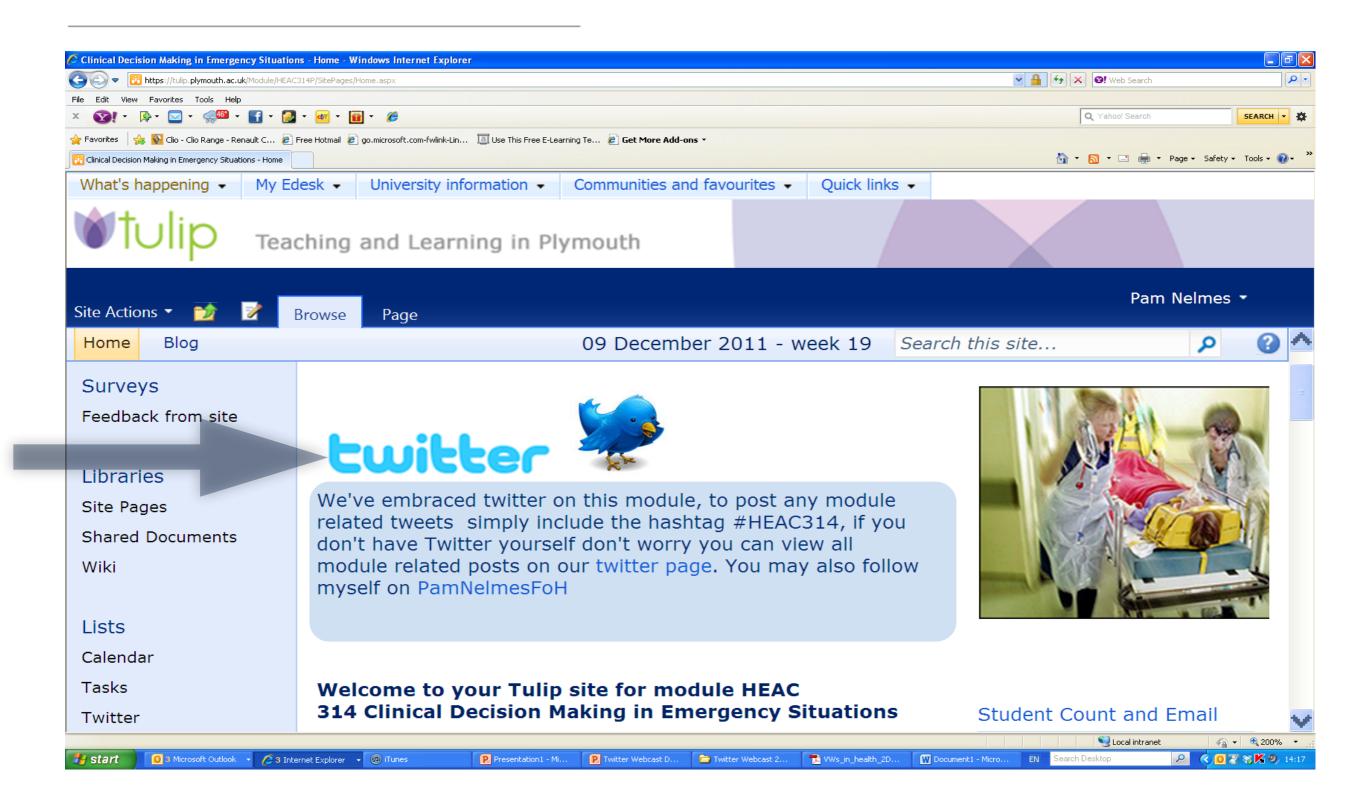

## Twitter in Higher Education: Where's the evidence?

- Increased student engagement (Junco, Heiberger and Loken, 2010)
- Enhanced communication, spontaneity of 'chatter' and relationships (Schroeder, Minocha and Schneider, 2010)
- Active learner participation: sharing links to resources and responding to tweets (ScaLe project, 2010)
- Teachers considering novel ways to interact, having greater appreciation of learning styles and alternative methods of formative assessment (ScaLe project, 2010)

### Twitter integrated into Virtual/Managed Learning Environments

#### Student Evaluation

### Strengths

- Increased interest in their subject
- Easy access to interesting articles, resources, links and discussions
- Relevance to their module and studies
- Increased scope of reading

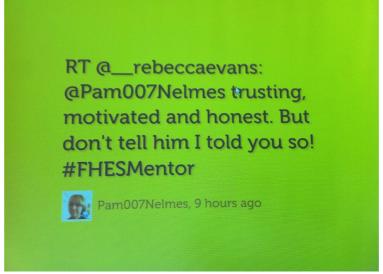

#### Limitations

- Lack of time
- Unfamiliarity
- Competition with other electronic resources
- Technophobia
- A belief that social networking invades privacy

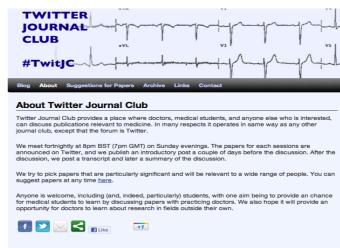

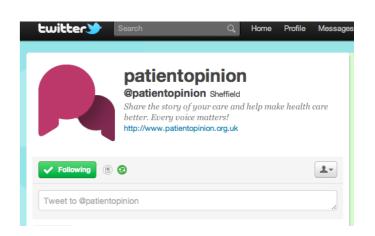

- Twitter is a perfect social platform to engage conversation
- Tweet chats enable communities to come together to discuss shared interests
- The key to uniting a tweeting community is the use of #hashtag #wenurses #HEAC364 #AdNursPlym

# Engaging the Healthcare Community

- The simplicity and immediacy of Twitter is having a cohesive effect within our healthcare communities
- Enabling us to engage as healthcare professionals (educators), students, patients, service users and stakeholders
- Potential benefit to the research community

#### healthcare network Insight, reports and data for NHS innovators

#### @NHS: How the NHS uses Twitter

There aren't many free, rapid channels of communication that are popular with younger people, but Twitter is one of them

The gift of social media

## Summary

- I. Twitter in higher education
- II. Twitter in healthcare

Twitter is enterprising: requiring effort and courage

As we engage, we learn and in doing so contribute to what Biz Stone (co-creator of twitter) called 'social alchemy'- the transformational nature of twitter
