LCA report requested: *Drainage and Sewage – PP multilayer vs Concrete*

Please note that any information acquired as result of this request is divulged exclusively for your personal use and it cannot be further distributed without further formal authorization. If you do not accept these terms, please do not complete this request.

By filling and signing this request, you acknowledge that you have read and agree to the conditions of use

Signature:

*Please send the filled out and signed request to contact@teppfa.eu
TEPPFA reserves the right to treat exclusively fully filled and signed documentation*

- *Comparison studies are provided for information purposes only. The environmental impact analysis for alternative pipe materials has been calculated based on the same functional unit and category rules as used for the plastic pipe system to which it is compared. The analysis of the environmental impact of the comparison material has been based on publically available data*
- *Please note that it might take up to 15 working days after receiving your filled request form for processing your request and sending you of the LCA report(s) requested.*
- *As TEPPFA has made the results of the LCA comparison studies available for the general public, following the principles of ISO 14040- 2006 and ISO 14044- 2006, a critical review of the LCA study is required. Different to ISO requirements for comparative LCA studies TEPPFA did not install a review panel, but commissioned a single critical review. This critical review was performed by Denkstatt GmbH. A summary of their review is included at the end of each comparison report.*
