GENERAL INFORMATION & SALE NOTES

LOCATION: The sale will be held at Newark Livestock Market, Great North Road, Newark, Nottinghamshire, NG24 1BY Tel:01636 676741 Fax:01636 611190
Email: enquiries@newarklivestocksales.com Website: www.newarklivestocksales.com

ACCOMMODATION: Please see a list of local Hotels and Bed & Breakfast on page 4.

CONDITIONS OF SALE: The auction Rules and Conditions of Sale drawn up by the N.B.A. This Sale is held subject to these rules and the Auctioneers' General Conditions of sale, both available on request. In the event of any discrepancy between the two sets of conditions, the N.B.A. Conditions of sale shall prevail.

METHOD OF SALE: All Pedigree cattle will be sold in guineas (105 pence) and in strict catalogue order, unless any alterations are announced by the auctioneers.

COMMISSIONS: The auctioneers will dutifully execute commission to purchase for buyers unable to attend the sale personally, upon the receipt of written instructions.

SETTLEMENT AND CLEARANCE OF STOCK: Settlement in full is due immediately at the close of the Sale. No Animal may leave the Sale Premises without an official 'Pass Slip', obtainable only from the Auctioneers upon settlement. Purchasers unable to remove their stock on the day of sale can arrange overnight accommodation with the Auctioneers on the understanding that all cattle are at Purchasers' risk.

PEDIGREE REGISTRATIONS TRANSFERS AND FEES: All pedigree animals purchased are eligible for transfer at the cost of the purchaser. Please see Breed Societies on page 6 for contact details.

SEMEN ROYALTY SCHEME BULL REGISTER: Purchasers are asked to note that where a female is catalogued as being served/inseminated by a 'Semen Royalty' Sire. The appropriate royalty will be payable by the purchaser prior to registration of the calf.

VETERINARY INSPECTION: For the buyer's convenience, a Veterinary Inspection will be carried out on all Pedigree bulls entered for the sale. A Veterinary Officer will examine general health and genetic defects particularly teeth, eyes, testicles, warts and locomotion. Any animal found with a genetic fault, disease or disorder will be rejected.

HERD HEALTH: as stated declared by the vendor in catalogue or from the rostrum.

IMPORTANT NOTICE TO PURCHASERS

1. This Sale is held subject to recommended Conditions of Sale of the National Beef Association.
2. This Sale is held subject to the Special Terms and Conditions of Sale recommended for Sales of Pedigree Beef Cattle by the National Beef Association. The preparation of these Terms and Conditions has proved a lengthy and costly process and, in order to defray the legal and other costs involved, and to provide a continuing source of revenue to assist the Association in its vital work for pedigree cattle breeders, the Council of the Association has decided that a special levy, amounting to £4 per male and £2 per female head/lot sold (plus VAT) shall be charged to each Purchaser.

This levy will be imposed at this Sale and added to Purchaser's accounts.

ENGLISH PREMIER SHOW & SALE

LINCOLN RED CATTLE SOCIETY

President: Alan Hargreaves

Independent Adjudicator: Mrs J Hurst

Any queries prior to Sale Day should be directed to our Secretary: Jayne Borrows,
Lincoln Red Cattle Society, Grange de Lings, Lincoln, LN2 2NA. Tel: 01522 511395
Email: secretary@lincolnredcattlesociety.co.uk

DETAILED PEDIGREES WILL BE AVAILABLE FOR INSPECTION IN THE AUCTIONEER'S OFFICE AT THE SALE.

VETERINARY TESTS FOR EXPORT:

Potential buyers from overseas or potential purchasers for clients overseas are required to contact the Secretary of the Lincoln Red Cattle Society regarding the cost and responsibility for the preparation of animals for export.

HERD HEALTH STATUS:

All animals in the catalogue are either:

- i) Accredited disease free or
- ii) Blood tested free of disease not more than 3 months prior to Sale and/or vaccinated regarding Bovine Viral Disease, Leptospirosis, Infectious Bovine Rhinotracheitis and Johnes Disease

BEEF RECORDING:

Weights are officially recorded by Signet where indicated.

The Society does not accept any responsibility for any statement made or views expressed in the notes appended to pedigrees in this catalogue concerning the animal offered for sale, their progeny or their forebears.

When you purchase Lincoln Red Cattle:

Please collect the animal's Pedigree Certificate at the Auctioneer's Office. To transfer the animal(s) into your Herd, detach the Transfer Certificate from the bottom of the Pedigree Certificate and either hand it to our Secretary along with the transfer fee(s) after the Sale, or post with a cheque to the Lincoln Red Cattle Society. Our transfer fee is £12.00/animal (incl of VAT).

We welcome new members to our Society and in order to register your Lincoln Reds you need to be a member. For more information please speak to our Secretary.

Sire - Norton Beau (P4183)

gd. Panworth Bashful 3 B1 (P18661)

gs. St. Fort Guv'nor (XP80036)

Dam - St. Fort Thora (Twin) L737 (XP91360)

gd. Hundleby Thora G8 (XP19847)

A rare opportunity to purchase an XP bull with impeccable 'P' bloodlines in his pedigree.

Grand-Sire: **Cockerington Tyler** was Supreme Champion at RHAS Ingleston & also the Royal Show.

Sire: **Norton Beau** was such a good stock bull that we used him on many of our XP cows.

Easy calving and good finishers are traits which **Rhinestone** will have.

Dam: **St. Fort Thora** comes from an interesting mix of **St Fort Guv'nor** and **Brooks Thora** bloodlines.

His deep red coat and nice temperament make him an attractive proposition for a stock bull.

His daily live weight gain from birth is 1.30 kg and at 13 months he weighed 572kg.

He has an impressive EBV beef value of 30 (top 5%)

Sire - Wragby Minstrel (XP80259)

gd. Anwick Phylis F6 (XP19773)

gs. St. Fort Jack Frost (XP80101) (89.85%)

Dam - St. Fort Orchid M812 (94.93%) (XP92019)

gd. St. Fort Orchid J586 (XP90586)

Rolex is the first bull offered for sale by our privately purchased stock bull, **Wragby Minstrel**.

Sire: **Minstrel** won several Championships as a young bull and was Reserve Male at The Great Yorkshire Show.

Minstrel has proved to be an easy calving bull and **Rolex** should inherit these traits.

Rolex has a DLWG from birth of 1.34kg.

Dam: **St Fort Orchid** is descended from **Hemingby Orchid** who was Female Champion at RHAS Ingleston. His dam is also related to **Beverley Hannah** who we purchased at the Highland Show, where she was Champion.

Rolex will develop, like his sire, into a powerful bull that should satisfy the requirements of a discerning Pedigree bull breeder.

ENGLISH PREMIER SHOW & SALE

UNDERSTANDING THE BREEDPLAN PERFORMANCE RECORDING INFORMATION IN THIS CATALOGUE

Only Aberdeen-Angus GROUP BREEDPLAN EBVs or INTERIM EBVs with Accuracy (Acc) can be validly compared between herds.

ESTIMATED BREEDING VALUES (EBVS)

The EBV is the best estimate of an animal's genetic merit for that trait.

ACCURACY

An accuracy value (Acc) is presented with every EBV and gives an indication of the amount of information that has been used in the calculation of that EBV. The higher the accuracy the lower the likelihood of change in the animal's EBV as more information is analysed for that animal or its relatives.

CALVING EASE

Calving Ease EBVs are based on calving difficulty scores, birth weights and gestation length information. More positive EBVs are favourable and indicate easier calving.

DIR: Direct calving ease indicates how this animal influences the birth of its progeny. Using a bull in the Top 1% for CE direct (+4.9) is predicted to result in approximately 15% fewer assisted calvings in 2 year old heifers compared with using a bull in the Bottom 1% (-11.2). This range is predicted to be smaller in cows. Remember that the dam's genetics and management are significant factors influencing calving ease in any mating.

DTRS: Daughter's calving ease indicates how well the animal produces daughters that have easier calving.

BIRTH AND FERTILITY

GL: Gestation Length EBV (days) is based on AI records. Lower (negative) GL EBVs indicate shorter gestation lengths which generally relate to easier calving and increased growth after birth.

BWT: Birth Weight EBV (kg) is based on the measured birth weight of animals, adjusted for dam age. The lower the value the lighter the calf at birth and the lower the likelihood of a difficult birth. This is particularly important when selecting sires for use over heifers.

SS: Scrotal Size EBV (cm) is an indicator of male fertility in regards to semen quality and quantity. Higher (positive) EBVs indicate higher fertility. There is also a small negative correlation with age of puberty in female progeny.

GROWTH

MILK: 200-Day Milk EBV (kg) is an estimate of an animal's milking ability. For sires, this EBV is indicative of their daughter's milking ability as it affects the 200-day weight of their calves.

200: 200-Day Growth EBV (kg) is calculated from the weight of animals taken between 80 and 300 days of age. Values are adjusted to 200 days and for dam age. This EBV is the best single estimate of an animal's genetic merit for growth to early ages.

400: 400-Day Weight EBV (kg) is calculated from the weight of progeny taken between 301 and 500 days of age, adjusted to 400 days and for dam age. This EBV is the best single estimate of an animal's genetic merit for yearling weight.

600: 600-Day Weight EBV (kg) is calculated from the weight of progeny taken between 501 and 900 days of age, adjusted to 600 days and for dam age. This EBV is the best single estimate of an animal's genetic merit for growth beyond yearling age.

MWT: Mature Cow Weight EBV (kg) is an estimate of the genetic difference in cow weight at 5 years of age. Smaller, or more moderate EBVs are generally more favourable.

CARCASE

CWT: Carcase Weight EBV (kg) estimates the genetic difference in carcase weight at a standard age of 650 days.

EMA: Eye Muscle Area EBV (cm²) estimates genetic differences in eye muscle area of a 300kg dressed carcase. More positive EBVs indicate better muscling on animals.

FAT: Rib Fat EBV (mm) estimates the genetic differences in fat depth at the rib in a 300kg dressed carcase. More positive EBVs indicate more subcutaneous fat and earlier maturity.

RBV%: Retail Beef Yield Percent EBV (%) represents total (boned out) meat yield as a percentage of a 300kg dressed carcase. A more positive EBV indicates higher percentage yield for the 300kg carcase size.

IMF%: Intra-muscular Fat Percent EBV (%) is an estimate of the genetic difference in the percentage of intra-muscular fat at the 12/13th rib site in a 300kg carcase. Depending on market targets, larger more positive values are generally more favourable.

Indexes combine the EBVs with economic information for specific market and production systems to rank animals based on relative profit values.

ENGLISH PREMIER SHOW & SALE

Terminal index

The Angus Terminal index is aimed at a commercial herd using Angus bulls over dairy cross cows to breed steers and heifers to turn off at 16 months of age. All progeny are destined for slaughter and no replacement females are selected from within the herd. There is some emphasis on calving ease while finishing steers at around 600 kg live weight (330 kg carcass weight) using a pasture based production system.

Use this index in a commercial herd to produce progeny for slaughter. The index has moderate emphasis on easier calving (ie getting a live calf with minimal human interference) while producing calves that will then grow quickly to market specifications at around 16 months of age. The index is focused on slaughter animals and does not account for maternal traits and is therefore not suited to breeding replacement females.

If you are using smaller framed cows or heifers in your herd, then you should also put extra emphasis on a higher Calving Ease Direct EBV when selecting a sire using this index.

Self Replacing index

The Angus Self Replacing index is aimed at an Angus herd selecting replacement females from within the herd while breeding steers and excess heifers to turn off at 18 months of age. There is emphasis on calving ease and maternal traits while also looking to finish steers for slaughter at around 615 kg live weight (330 kg carcass weight) using a pasture based production system supplemented with extra rations during the finishing phase.

This Self Replacing index is also suitable to using Angus sires over mixed breed cows where replacement females are sourced from within the herd. There may be some hybrid vigour expressed in the progeny depending on the breed type of the cows used. Therefore you should consider placing extra emphasis on the Calving Ease EBVs (more positive) of the sire to allow for possible heavier birth weights of his calves due to hybrid vigour.

Use this index in both commercial and pedigree herds where you are balancing the requirements of selecting replacement females while also producing animals for slaughter.

The Aberdeen-Angus GROUP BREEDPLAN Estimated Breeding Values contained in this Sale Catalogue were compiled by the Agricultural Business Research Institute (ABRI) from data supplied by the breeders. Neither the Aberdeen-Angus Cattle Society nor the ABRI oversee or audit the collection of this data.

Ross's dam Rawburn Rosebud H851 goes back to one of the most successful families in Canada, whilst his sire leaves shape and the biggest 200, 400 and 600 day weights for his group. Definitely a bull for the future.

This bull has also been semen tested.

Paxman's GS was our stock bull **Hurdcott Elgar** who stood as Intermediate Champion at Perth Bull Sales.

St Fort Paxman has excellent maternal EBV's in top 90% of breed for calving ease and top 60% for milk.

His Dam **St Fort Pam G681** has descended from **Netherton Pam S56** who was one of foundation females. She was Reserve Female Champion at Perth Bull sales.

His pedigree will ensure easy calving offspring. His dams sire was **Fordafourie Kris** who we purchased for £3,800 as a 6 month old calf when his dam **Katie of Fordafourie** was sold for £8,000 at Perth. **Fordafourie Kris** grew into an excellent stock bull and we used him for 3 or 4 years.

Paxman DLWG from birth is 1.54kg. St Fort is in the SAC Health Scheme.

Prince Cassius is the first son of herd record priced bull **Shadwell Black Broughton** to be offered for sale with growth figures that put him in the top 5% for 200 days and top 10% for 400 and 600 days He is a nice natured bull with plenty of style and character, he was a heifers calf and calved easily.

Shadwell Black Broughton was Male Champion and Interbreed Performance Champion at the Royal Welsh show, he was also Junior Male champion and Reserve Overall Male at the Angus National in 2011.

He was then sold after being used on heifers to the **Idvies** herd in Scotland for a herd record high five figure sum.

St Fort Engineer has a Breed plan EBV of +45

His sire, **Nethertone Keystone** was Interbreed Champion at the Perth show in 2009.

He has an impeccable record in our herd of easy calving along with an excellent nature.

Engineer's dam's dam is **Rawburn Elergy** who has produced a very strong line of female offspring. Her sire was the famous **Rawburn Transformer**.

His DLWG from birth is 1.64kg.

We are delighted to offer his young bull for sale at Newark.

St Fort is in the SAC Health Scheme & we test for BVD & Johne's disease.

Our herd of 83 Aberdeen Angus cows was established in 1993.

ENGLISH PREMIER SHOW & SALE

Beef Shorthorn Cattle Society Sale Regulations

Notes for Sale/Auction Catalogues.

The Beef Shorthorn Cattle Society has previously sanctioned the use of Maine Anjou cattle (a French breed of Shorthorn derivatives) in a controlled breed improvement programme. That successful programme is now complete and has been closed (Oct 1999)

All calves born on or after 1st January 2001 shall be registered in the Coates Herd Book (Beef) with no mention of percentage (pertaining to Maine Anjou influence) provided that both parents are previously registered in Coates Herd book (Beef). Purchasers who are interested in the influence of Maine Anjou in any prospective purchase are invited to inspect the four-generation pedigree certificate, or contact the Secretary for further details. Cattle born before 1st January 2001 will continue to display the percentage of pure Shorthorn blood on their certificate.

Other Society rules as follows:

- By a ruling of the Directors of the Beef Shorthorn Cattle Society a levy of three per cent of the net sale price (after deduction of auctioneers commission) will be deducted from the vendors statements before settlement and paid to the Beef shorthorn Cattle Society.
- All Cattle will be sold with an NBA fertility warranty. The cost of this warranty is £6.00 + vat per male animal and £4.00 + vat per female animal. This cost will be divided equally between the vendor and the purchaser and collected by the auctioneer at the time of sale. The auctioneer will pay this money directly to the NBA.
- Transfer of ownership to the purchaser will be undertaken by the Society free of charge.
- Animals will be inspected in the sale premises and, by a ruling of the Directors, the inspector(s) is empowered to instruct any exhibitor to withdraw from the show and sale any animal they consider not to be of the required standard. Bulls will be inspected by a vet appointed by the Society. Bulls not attaining the required minimum testicle size, or displaying irregular testicular conformation or displaying overshot or undershot jaws will be rejected from the sale.
- There will be a minimum selling price of 1500gns on each bull entered for sale. Bulls not attracting a bid of 1500gns will be passed out of the ring unsold
- All show animals must be halter led.
- Grading register animals will be sold at the end of the sale.
- The Beef Shorthorn Cattle Society operates a compulsory health testing scheme at all Society sales as follows:

Compulsory Health Testing for Beef Shorthorn Society Sales

“All animals entered for Society sales must come from herds which are members of a Checs approved health scheme and have been testing for BVD and Johnes for a minimum of 12 months. Animals must be individually blood tested no more than 3 months prior to the sale for BVD, (antigen AND antibody), and IBR antibody unless coming from a herd which has accredited status for the relevant disease. Accredited herds do not need individual animal tests for the diseases for which they are accredited. All animals whether from an accredited herd or not must be vaccinated against BVD. Animals testing antigen positive (PI) for BVD will not be accepted for sale. The results of the blood tests or accredited status must be displayed at the sale on a health pen card supplied by a Checs approved laboratory. All animals must have an individual pen card. No other health information will be allowed to be displayed.

IT IS THE RESPONSIBILITY OF THE VENDOR TO ENSURE THAT THE HEALTH PEN CARDS ARE AVAILABLE FOR THE SALE.

ANIMALS ARRIVING AT A SALE WITHOUT A CORRECTLY COMPLETED HEALTH PEN CARD WILL NOT BE ALLOWED IN THE SALE.

ENGLISH PREMIER SHOW & SALE

UNDERSTANDING THE BREEDPLAN PERFORMANCE RECORDING INFORMATION IN THIS CATALOGUE

Only Beef Shorthorn GROUP BREEDPLAN EBVs or INTERIM EBVs with Accuracy (Acc) can be validly compared between herds.

ESTIMATED BREEDING VALUES (EBVS) The EBV is the best estimate of an animal's genetic merit for that trait.

ACCURACY

An accuracy value is presented with every EBV and gives an indication of the amount of information that has been used in the calculation of that EBV. The higher the accuracy the lower the likelihood of change in the animal's EBV as more information is analysed for that animal or its relatives. Accuracy below 75% should be considered low.

CALVING EASE

Calving Ease EBVs are based on calving difficulty scores, birth weights and gestation length information. More positive EBVs are favourable and indicate easier calving.

DIR: Direct calving ease indicates how this animal influences the birth of its progeny.

DTRS: Daughter's calving ease indicates how well the animal produces daughters that have easier calving.

BIRTH AND FERTILITY

GL: Gestation Length EBV (days) is based on AI records. Lower (negative) GL EBVs indicate shorter gestation lengths which generally relate to easier calving and increased growth after birth.

BWT: Birth Weight EBV (kg) is based on the measured birth weight of animals, adjusted for dam age. The lower the value the lighter the calf at birth and the lower the likelihood of a difficult birth. This is particularly important when selecting sires for use over heifers.

SS: Scrotal Size EBV (cm) is an indicator of male fertility in regards to semen quality and quantity. Higher (positive) EBVs indicate higher fertility. There is also a small negative correlation with age of puberty in female progeny.

GROWTH

MILK: 200-Day Milk EBV (kg) is an estimate of an animal's milking ability. For sires, this EBV is indicative of their daughter's milking ability as it affects the 200-day weight of their calves.

200: 200-Day Growth EBV (kg) is calculated from the weight of animals taken between 80 and 300 days of age. Values are adjusted to 200 days and for dam age. This EBV is the best single estimate of an animal's genetic merit for growth to early ages.

400: 400-Day Weight EBV (kg) is calculated from the weight of progeny taken between 301 and 500 days of age, adjusted to 400 days and for dam age. This EBV is the best single estimate of an animal's genetic merit for yearling weight.

600: 600-Day Weight EBV (kg) is calculated from the weight of progeny taken between 501 and 900 days of age, adjusted to 600 days and for dam age. This EBV is the best single estimate of an animal's genetic merit for growth beyond yearling age.

MWT: Mature Cow Weight EBV (kg) is an estimate of the genetic difference in cow weight at 5 years of age. Smaller, or more moderate EBVs are generally more favourable.

CARCASE

CWT: Carcase Weight EBV (kg) estimates the genetic difference in carcase weight at a standard age of 650 days.

EMA: Eye Muscle Area EBV (cm²) estimates genetic differences in eye muscle area of a 300kg dressed carcase. More positive EBVs indicate better muscling on animals.

FAT: Rib Fat EBV (mm) estimates the genetic differences in fat depth at the rib in a 300kg dressed carcase. More positive EBVs indicate more subcutaneous fat and earlier maturity.

RBV%: Retail Beef Yield Percent EBV (%) represents total (boned out) meat yield as a percentage of a 300kg dressed carcase. A more positive EBV indicates higher percentage yield for the 300kg carcase size.

IMF%: Intra-muscular Fat Percent EBV (%) is an estimate of the genetic difference in the percentage of intra-muscular fat at the 12/13th rib site in a 300kg carcase. Depending on market targets, larger more positive values are generally more favourable.

TERMINAL INDEX

The Shorthorn Terminal index is aimed at a commercial herd using Shorthorn bulls over dairy cross cows to breed steers and heifers to turn off at 19 months of age. All progeny are destined for slaughter and no replacement females are selected from within the herd. There is some emphasis on calving ease while finishing steers at around 580 kg live weight (310 kg carcase weight) using a pasture based production system.

Use this index in a commercial herd to produce progeny for slaughter. The index has moderate emphasis on easier calving (ie getting a live calf with minimal human interference) while producing calves that will then grow quickly to market specifications at around 19 months of age. The index is focused on slaughter animals and does not account for maternal traits and is therefore not suited to breeding replacement females.

If you are using smaller framed cows or heifers in your herd, then you should also put extra emphasis on a higher Calving Ease Direct EBV when selecting a sire using this index.

SELF REPLACING INDEX

The Shorthorn Self Replacing index is aimed at a Shorthorn herd selecting replacement females from within the herd while breeding steers and excess heifers to turn off at 19 months of age. There is emphasis on calving ease and maternal traits while also looking to finish steers for slaughter at around 580 kg live weight (310 kg carcase weight) using a pasture based production system supplemented with extra rations during the finishing phase.

This Self Replacing index is also suitable to using Shorthorn sires over mixed breed cows where replacement females are sourced from within the herd. There may be some hybrid vigour expressed in the progeny depending on the breed type of the cows used. Therefore you should consider placing extra emphasis on the Calving Ease EBVs (more positive) of the sire to allow for possible heavier birth weights of his calves due to hybrid vigour.

Use this index in both commercial and pedigree herds where you are balancing the requirements of selecting replacement females while also producing animals for slaughter.

The Beef Shorthorn GROUP BREEDPLAN Estimated Breeding Values contained in this Sale Catalogue were compiled by the Agricultural Business Research Institute (ABRI) from data supplied by the breeders. Neither the Beef Shorthorn Cattle Society nor the ABRI oversee or audit the collection of this data.

Draco was shown with much success in 2013 and was South East Simmental Club, Simmental of the year. He is by **Darsham Playboy** (Darsham Kit-Kat son) out of **Tillymaud Malvenas 58th** who has bred consistently well for us.

His temperament is superb and has been fertility tested.
