

Group 1

Roles of Women in wetland management

Resource Persons: Michael Simon, Dr.Kanokwan Manoram
 Staff/WLE: Mayvong Sayatham, Bach Huy Hoang, Nguyen Thu Thao
 Fellows: Minitta Taosouvanh, Suon Siny, Le Thi Hong Nhung, Phan Cao Duong, Le Van Chinh
 Volunteer: Chonthicha Kotewong
 Naphae, 2015

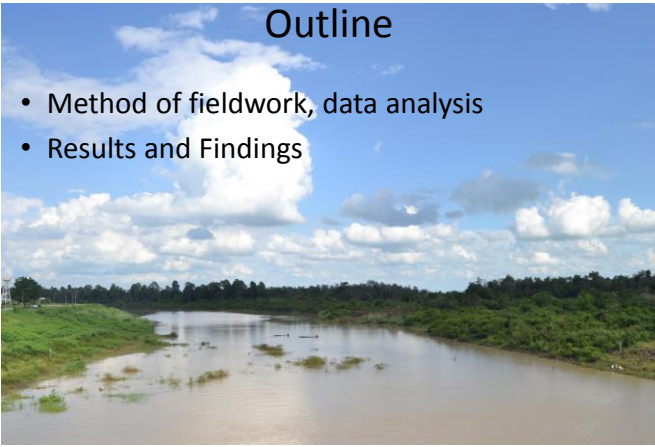

Group 1

Outline

- Method of fieldwork, data analysis
- Results and Findings

Method

- Survey by semi-structured interview based on gender material provided by Michael Simon
 - Activity profile (productive, reproductive, community work)
 - Access and Control profile (Resources, Benefits)
- Group discussion for design of interview content

ACTIVITY PROFILE					ACCESS AND CONTROL PROFILE				
Village Name	Sex		Date		Village Name	Access		Control	
	Women/ girls	Men/ boys	When	How long		Women	Men	Women	Men
Productive activities					Resources in community and/or household				
Fishing					Land for subsistence farming				
Feeding fish					Land for cash crops				
Cash crops					Labor				
Caring for animals					Fishing boats and gear				
Community activities					Household assets – equipment, technology				
Care of children					Human assets – healthcare				
Cooking for family					Use and access of common resources:				
Collecting water					* Forests				
Subsistence/food production					* rivers/banks				
Family healthcare					* wetlands				
Community work					BENEFITS derived from the use of resources				
Community management activities					Income from sale of cash crops				
Community politics					Income from sale of fish and other aquatic animals				
Community seasonal activities					Household assets – equipment and technology				

Method (cont.)

- Trial survey: group-interview 1 person
- Revised the content of interview

Method (cont.)

- Sub-group split for individual interview: 5 persons (3 persons at wetland area, 2 at learning centre)

Data analysis

- Gathering the information collected by sub-groups
- Filtering/processing data/information

Results and findings
