

VenueApp is a customized mobile app for wedding venues.

We design and build your wedding venue its very own mobile application. A custom VenueApp is a crucial sales tool. It will allow you to market your venue and engaged couples on their iPhones and iPads. The app is designed to offer venue-seeking couples the best possible digital introduction of your property and encourage them to contact you.

How it works

- 1 Engaged couples discover and download your VenueApp when they see the logo on your website and on your printed marketing material. It will also be easy to find when they search for wedding apps in the App Store.

- 2 Homepages introduce a couple to beautiful high-resolution images of your venue that stretch across the entire device screen.

- 3 Idea Pages introduce the couple to 7-10 specific highlights about your wedding venue and/or the surrounding area.

- 4 E-Postcards enable the couple to share branded photos of themselves at your venue with friends across social media networks.

5 Vendors Listings allow the couple to browse your staff's recommended vendors by category.

6 The social media page allows couples to browse your venue's latest blog or facebook posts without leaving your VenueApp.

7 One of the most important assets of your VenueApp is the one you will see. The extensive administrative back end allows you to capture the email addresses of potential clients and send push notifications to couples who download your app. You can also use the administrative back end to edit, remove and add new pages to your app.

Check out some clients apps

A ranch and winery estate in California.

A historic urban restaurant venue.

A renowned golf club in North Carolina.

An elegant coastal wedding estate in Maine.
