nullified for national plan.
and preparations for natural disasters are not thoroughly prepared or produced.

utilization of the RTA mechanism, which means that the RTA must only operate when the disaster occurs. The role of the RTA in disaster relief is to provide logistical and financial aid to assist the government. However, the major common difficulty for both levels is the limitation of knowledge and experience in managing and coordinating the RTA's efforts. The difference in the scope and coordination of the RTA's operations in the case study and the RTA's operations in real-world situations can be seen. This study reveals that the difficulties for the RTA can be categorized into two categories.

Interviews

Luitenant T. A. C. A. A. in Bangkok, the Coordinator of Joint Disaster, uses the coordination model developed by the National Institute of Disaster. The RTA seeks to ensure that the disaster relief operations during the Thailand floods in 2011 in Bangkok. This study uses a qualitative approach for the case-study, utilizing content
