Customer Focus

GPX Global Systems, Inc. Maximizes Efficiency Worldwide with ProjectXnet Cloud Hosting Services

GPX Global Systems, Inc. builds and operates private, carrier-neutral Internet Exchanges and Internet Data Centers in emerging commercial markets around the world.

With offices in New York, Mumbai and Cairo, this rapidly-growing international company needed a way to keep all of its employees connected and working efficiently. "We have approximately 40 employees, and many of them travel a lot and work from home," said John Joyner, Vice President of Facilities Development.

"Between our offices in different parts of the world and our ongoing business efforts in developing countries, we want to make sure our systems are accessible worldwide."

In 2009, The Cram Group began hosting Meridan Systems' Prolog Manager and Prolog Converge for GPX Global Systems, Inc. This helped the company better manage construction of its data centers.

Technology Innovation

Virtualize Your IT Infrastructure

vmware®

Transformation of in-house Physical IT infrastructure to cloud computing build on virtualization technology continues to be the most popular business driven IT service chosen by many organizations. Products like the VMware vSphere suite helps IT teams deliver the highest level performance in cloud services. With a focus on being the Cloud Operating System for the world, VMWare vSphere 5 will continue to set the highest standard in virtualization. With the release of vSphere 5 there are nearly 200 new & enhanced capabilities.

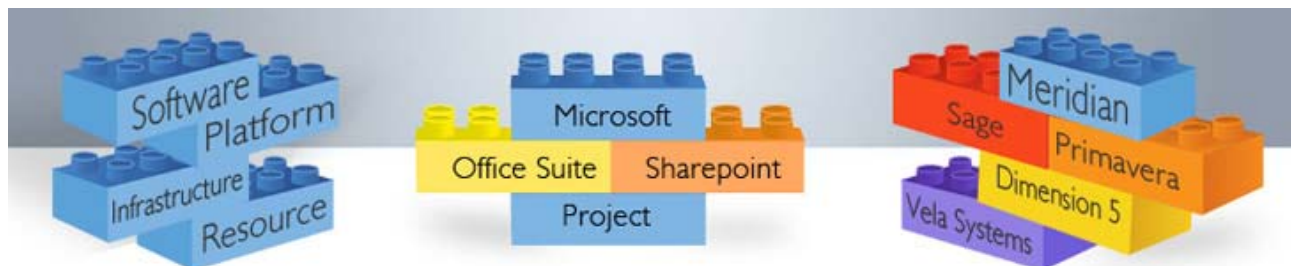

The Cram Group manages the evaluation and upgrades of vSphere and other products to all of our hosted services at no cost to customers. With the release of new vSphere 5, VMware continues to push limits of performance and scale. Enhancements to built-in capabilities for resource optimization, application availability and operational automation capabilities brings dramatic increases to operational capabilities, flexibility and IT service levels. vSphere 5 now supports Virtual Machines that are up to four times more powerful than those of previous versions, these new VMs can support as much as 1TB of memory and 32 virtual CPUs, and they can process in excess of 1 million I/Os per second. This dramatic increase in Compute, Memory, Networking & Storage capabilities allows TCG to more precisely manage and deploy business critical applications.
