DECCO Ltd. Streamlines Processes and Increases Efficiency with TCG Cloud Hosting Services

A Need for Better Organization and File Management

DECCO Ltd., based in the Cayman Islands, provides a variety of services to owners and sponsors of construction projects. With approximately 30 employees and multiple clients, the company wanted to streamline its file management system by moving from paper to electronic files.

"Our employees work in the office and in the field, and we needed an easier way to communicate and share information electronically," said Harlan Dews, Senior Planner and Scheduler. "We wanted everyone to have access to files and other project-related documents, both in the office and at job sites."

The Solution: The Cram Group's ProjectXnet Cloud Hosting Services

Technology Innovation

Broad Access

AECCloud Broad Access is the result of the convergence of TCG's Unified Access Portal and several major infrastructure products. This Newsletter focus is on a key component of that from Citrix known as Xenapp and the Citrix Receiver clients.

Citrix Receiver is the new universal client that enables on-demand delivery of virtual desktops and Windows, Web and SaaS applications to a wide range of devices associated with Windows, Mac OS/iOS, Android, Linux and Google laptops. Citrix's goal is simple and straightforward in its intent: Deliver applications, desktops and workspaces to end users no matter where they are, and on whatever device they're using.

The Cram Group is focused on providing the same or higher quality at the same or lower cost for Cloud Hosting, Software, and Services. **AECCloud Broad Access** enables us to go beyond native device mobile point solutions, and ensure that we support those as well as delivery of any application with the right method for the right device. Combining TCG, Citrix, and other technologies enable us to seamlessly enable self service to access, branding, provisioning, and as a result device choices at no additional cost.
