

DECCO Ltd. Streamlines Processes and Increases Efficiency with ProjectXnet Cloud Hosting Services

A Need for Better Organization and File Management

DECCO Ltd., based in the Cayman Islands, provides a variety of services to owners and sponsors of construction projects. With approximately 30 employees and multiple clients, the company wanted to streamline its file management system by moving from paper to electronic files.

“Our employees work in the office and in the field, and we needed an easier way to communicate and share information electronically,” said Harlan Dews, Senior Planner and Scheduler. “We wanted everyone to have access to files and other project-related documents, both in the office and at job sites.”

The Solution: The Cram Group’s ProjectXnet Cloud Hosting Services

In 2010, The Cram Group began hosting Meridian Systems’ Prolog Manager and Prolog Converge for DECCO Ltd. This helped the company streamline its file management and archiving system, and communicate better with clients.

“Since we started working with The Cram Group, we’ve become much less dependent on paper files,” Dews said. “Previously, we had thousands of paper files for each project—which made it difficult to manage and hand off projects when complete. Now we have a one-stop shop for all project-related information, and files can be accessed any time from any location.”

“Our employees work in the office and in the field, and we needed an easier way to communicate and share information electronically,” said Harlan Dews, Senior Planner and Scheduler. “We wanted everyone to have access to files and other project-related documents, both in the office and at job sites.”

The Cram Group's ProjectXnet Cloud Hosting Services have also helped DECCO Ltd. increase efficiency in other aspects of its construction projects—including providing greater accountability and reporting capabilities, controlling project costs, tracking employees' time spent on projects, and increasing employee productivity.

"We're making better decisions earlier in the construction process, which translates into cost savings as projects progress," Dews said. "We're also more organized and efficient because we're notified electronically as projects move forward. This helps prevent projects from becoming backlogged."

DECCO Ltd. appreciates the support and reliability that The Cram Group provides. "Their service and response time is excellent," Dews said. "When we have a difficult question we always get a response right away, no matter what time it is."

"We're also pleased with the connectivity and security of our business applications," Dews said. "The Cram Group understands our need to work efficiently and provide excellent service to our clients, both in the office and in the field."

DECCO Ltd. plans to continue partnering with The Cram Group for its hosting needs. "The Cram Group has grown with us and helped us manage our software more effectively," Dews said. "We look forward to continuing to work with them as our company expands in the future."

About DECCO Ltd.

DECCO Ltd. provides services to owners and sponsors of construction projects. Their team of experienced, talented professionals provides a range of services throughout the project cycle, including concept planning, design management, procurement, construction, commissioning and hand-over to facility management. Services are tailored to meet the needs of each client, utilizing various delivery methods. For more information, visit <http://www.deccoltd.com>.
