

SKYFORM COLUMNS

Material: 4MM ACM

PORTLAND STATE UNIVERSITY ACADEMIC AND RECREATION CENTER

SKYFORM COLUMNS

Product Ecosystem Control:

Skyline Sheet Metal has complete control of the design, fabrication, shipping and installation of our Skyform Columns. With this level of control we are able to react to construction tolerances and project schedules with a level of efficiency that is just not possible when relying on a third party fabricator.

Benefit:

Skyline's unique control of the products ecosystem provides a level of service and quality that is hard to reproduce with a third party Column Cover supplier in conjunction with a contract installer.

Look and Feel:

Columns need to match the wall panel system? Not a problem when columns are specified along side Skyline's numerous proprietary wall panel systems. Skyline can match the finish and in some cases even make the column covers out of the same material specified for the wall panels.

SKYFORM COLUMNS

Material: .125 ALUM KYNAR FINISH

Joint types:
 Skyline offers round, square, rectangular, and oblong column covers with either a hairline or reveal joint. Choose from our many options to configure the column cover look you desire.

Custom:
 Designers have a vision and at Skyline we want to facilitate this. Every Column Cover is custom designed for the particular project in mind, from fastening method to look and feel of the joint layout. We are capable of manufacturing to any design spec and we encourage designers not to hold their visions to a list of design specs in a catalog cut sheet. We take the approach of you design it and we will make it happen..

ALUMINUM PLATE:
 3003-H14, 5052,
 Aluminum has a density around one third that of steel and is used advantageously in applications where high strength and low weight are required
Finish: Kynar, Powder Coat, Anodized

ACM & MCM:
 Aluminum and Metal Composite Materials (ACM & MCM) feature such attributes as superior flatness, vibration dampening, durability and ease of maintenance. ACM & MCM both offer the rigidity of heavy-gauge sheet metal in a lightweight composite material
