A Burlington Northern Santa Fe worker was killed Monday morning when he was struck underneath, Amarillo Police Department. Lt. Gary Trupe said.

About 11:10 a.m., Amarillo police, fire and emergency personnel responded to a call at 10; occurred on railroad tracks between South Williams Street and the Ross Street overpass in

The Federal Railroad Administration will investigate the accident, a spokesman said Mon.

Officers contacted BNSF officials, who reported the accident. Burlington employees were n one track to another when the car struck the man, pulling him under the car, Trupe said.
because they had discovered a leak and were going to repair it, he said.

Rail grinders are used to help maintain railroad tracks, BNSF spokesman Joe Faust said.

“They were moving it back to another position to try to fix that, and somehow through all miscommunication (occurred) and the gentleman was struck by the western end of the track underneath the train,” Trupe said.

The employee, whom Trupe described as a white male in his 50s, was pronounced dead at BNSF said BNSF is investigating the fatal accident and no criminal charges have been filed employee’s family late Monday.

Potter County Justice of the Peace Gary Jackson ordered an autopsy for the employee, Trupe said. Occupational Safety and Health Administration spokesman Juan Rodriquez said agency of whether they will conduct an investigation of the accident Monday afternoon.

Federal Railroad Administration spokesman Mark Murray said his agency’s policy is to investigate in the U.S.

The last reported railroad fatality in Potter County happened in March 2002 where Raef Cram, the eastern part of the county, Federal Railroad Administration records show. An eastbound Caravan, killing a 44-year-old man inside the van. Potter County commissioners later closed

The fatal accident marks the first major Amarillo railroad incident since a Sept. 16 rail employee was operating a remote-control car in the process of putting together a train, Faust said, causing the car’s connecting device to puncture a neighboring car loaded with pentane, Faust said, pentane car to leak and catch fire, he said.

Two locomotives and 26 cars were involved in the accident, a BNSF report said. Of all the hazardous material, four were damaged and one car released the hazardous material.

The explosion forced about 200 people to evacuate nearby homes, businesses and schools caused about $853,000 in equipment damage and $93,000 in yard damage, according to
