CT-250 ROTO-SPIN™ DATACOM JACKET STRIPPER

*Perfect to Strip Fiber-Optic, Category 5, Datacomm
Virtually any Jacketed Cable!*

**"REVOLUTIONARY
DESIGN"**

**Save valuable time by using
this unique stripping tool!**

SAVE TIME & CUT LABOR COSTS!

The **Roto-Spin** is a new tool which features unique characteristics to strip the jacket of electric or communication cables and to facilitate and speed up cable preparation for electrical or fiber optic connections.

The **Roto-Spin** has a sliding cable stop which can be set and locked to a specific length. The cable stop can also be removed to strip long lengths.

Blade cutting depth is set by a rotating cam. Each notch on the cam has a different height that precisely sets blade penetration. The notched cam can also be turned over for more depth of cut settings. In addition the **Roto-Spin** has a double vee grooved cable guide that can be rotated 180° for large and small cables.

To strip the cable after the tool is adjusted is extremely simple and quick. Press down to open the vee cable guide and insert the cable all the way to the stop. Holding the cable in one hand rotate the tool a couple of times and pull out. The jacket can be easily peeled off since it was ring cut and slit lengthwise. The blade is able to rotate on itself thanks to a friction free precision ball bearing.

FEATURES

- Ring & straight cut in one operation from .16"(4mm) to .60"(15mm) Dia. with precision
- Universal tool with an innovative rotating cam that makes it foolproof to set the depth of cut
- Cam has 16 different settings from .010" to .120" in increments of .005" & .010" (.125 & .25mm)
- Clever adjustable stop with scale in inches & mm to strip cables the same length every time
- Precision aerospace miniature ball bearing easily swivels the blade between ring & straight cuts
- Two position quick cable clamping vee for large and small cables
- Easy blade replacement with blade storage provided in the cable stop
- Weight 3oz. (30 Grams) Length 6" (15cm)
