

NEXT GENERATION MANUFACTURING SUMMIT

March 25 – 27, 2014

### **Innovative Application of Predictive Analytics for Supply Chain Execution**

This workshop explored the power of predictive analytics using SherTrack SNAPPS™ a highly innovative new supply chain technology for planning and scheduling complex manufacturing operations. By leveraging this approach you enable a transformational lean-pull process in complex manufacturing and distribution operations. Embedding analytics in the process produces breakthrough results that improve operational resiliency and reliability while reducing overall supply chain costs. Several published case studies were highlighted using this predictive analytics technology approach for supply chain optimization at premier Global 100 Manufacturing companies.
