

Mid-Atlantic Fishery Management Council Visioning Survey

The Mid-Atlantic Fishery Management Council is looking to its constituents to help shape the future of our fisheries. Our objective is to gather as much information as possible about what is most important to you. The Council will use your input to develop a shared vision for the future of our fisheries and a strategic plan to accomplish the vision.

In this survey, “fisheries” refers to the species that the Council manages, the environment those species live in, the fishermen, and other people in related industries.

The Mid-Atlantic Council is responsible for managing fisheries in federal waters (3-200 miles from shore) between New York and North Carolina. The survey focuses primarily on these fisheries.

In addition to this survey, there are visioning surveys for each of the Council's managed species. All participants may complete one of each of the surveys. You may access the online versions of these surveys on the Council website.

The Mid-Atlantic Council is also reaching out to speak directly with its stakeholders at public events and meetings. If you would like to be involved in this aspect of the project, please check our visioning webpage (www.mafmc.org/vision) for upcoming events or contact Mary Clark at (302) 526-5261 or mclark@mafmc.org.

Because your time is very valuable to us, we have designed this survey to take about 15 minutes. Your input will have a real impact on how the Council operates and manages our fisheries. We hope that you will continue to be involved in this cooperative project and provide ongoing input into fisheries management going forward.

Before you take this paper survey, please consider taking the online version of the survey instead at www.mafmc.org/vision.

When you have completed the survey, please mail or scan and email it to:

14) In your view, what are the top three (3) challenges facing Mid-Atlantic fisheries today?

1:

2:

3:

Congress requires the Council to manage fisheries for "optimum yield." Congress defined "optimum" as providing the greatest benefits to the United States, particularly with respect to food production and recreational opportunities, and taking into account the protection of marine ecosystems. Optimum yield is based on the maximum sustainable yield from the fishery, as reduced by any relevant economic, social, or ecological factor.

15) Please rank these priorities according to your view of which is most important, with 1 being most important and 4 being least important.

- _____ Food production
- _____ Recreational opportunities
- _____ Protection of marine ecosystems
- _____ Economic and social factors
