Mid-Atlantic Fishery Management Council  
MAFMC

Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Deborah Lee Chill

MAFMC

Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Harriet Adams

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

chris harrison

This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Judith Foran
1614 West 6th Street
North Platte, NE 69101
Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Mr. Brad Snyder
8887 Dallas Ln N
Osseo, MN 55369
Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Ellen Sanford

The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Ms. Jeane Harrison

Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Don Owens

San Diego, CA 92104
Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Lynn Wilbur

Sitka, AK 99835
Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Gala Munoz  
3382 Chartwell Ave.  
Prince George, BC V2N 6Z8
Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Alex A. Bobroff

Homer Glen, IL 60491
Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

3020 11th St NW  
Albuquerque, NM 87107
Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Richard Morgese

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Mrs. Kristen Breslin

The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Andrew Arneson

There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Mrs. Nicole Berkheimer
5709 Bluewood Lane
Knoxville, TN 37921
Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Ms. Debbie Thomas
P.O. Box 2377
Fernley, NV 89408
Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Sarah Mundal
744 Pacheco St
San Francisco, CA 94703
Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

Bow, NH 03304
Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

angelini sandra

Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Lauren Swaim

Little Rock, AR 72205
Mid-Atlantic Fishery Management Council
MAFMC

Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Ms. Lucy Schneider

Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

theresa gorrez

Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Greg Pregent

Turners Falls, MA 01376
Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Alexandr Yantselovskiy

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Tom Falvey

Mid-Atlantic Fishery Management Council
MAFMC

Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Mr. L & B Robertson
8903 Brandywyne Dr
Louisville, KY 40291
Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Burnaby, BC V5A 1E3
Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Ms. Marsha Kimball

Elk Rapids, MI 49629
Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

David and Carol Butler

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

sarah harber

Mid-Atlantic Fishery Management Council  
MAFMC

Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Patricia Gonzalez

Greeley, CO 80634
Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Ms. Karen Mott
25 Fenwick St
Greenlawn, NY 11740
Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Dear Chairman Robins and Council Members:  

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.  

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.  

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.  

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.  

Thank you for your consideration.  

Sincerely,  

Ms. Marie Perkins  
250B S. Maple Avenue

Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Ron Berti

Mid-Atlantic Fishery Management Council
MAFMC

Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Sylvia Schippers

Mid-Atlantic Fishery Management Council  
MAFMC

Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

barn lincoln

Mid-Atlantic Fishery Management Council  
MAFMC  

Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure that the plan is effectively implemented on the water.

There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Laurel Powers
52 Center Rd.
Petaluma, CA 94952
Mid-Atlantic Fishery Management Council  
MAFMC

Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

Mid-Atlantic Fishery Management Council
MAFMC

Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Matt Brzezinski

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Mr. Bruce Endicott
919 Laurelhurst Dr
Eugene, OR 97402
Mid-Atlantic Fishery Management Council  
MAFMC  

Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Ellen N. Duell  
4650 Lamont Rd.  
Yellow Springs, OH 45387
Mid-Atlantic Fishery Management Council
MAFMC

Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Mid-Atlantic Fishery Management Council
MAFMC

Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Natalie Hartman

The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Dyann Berndt

This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Ms. Kelli Williams

Mid-Atlantic Fishery Management Council
MAFMC

Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Gillian Wilkerson

Mill Valley, CA 94941
Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

1653 Kirkham Dr
Arnold, MO 63010
Mid-Atlantic Fishery Management Council
MAFMC

Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

john harris

The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Ms. Sara Lazarus

Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16. It's your responsibility.

Thank you for your consideration.

Sincerely,

Mr. Vaughn Anderson  
6205 Shoreline Dr Apt 1101  
Apt 1101  
Saint Petersburg, FL 33708
Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Mr. Joshua Seff
9508 George Washington Dr.
McKinney, TX 75070
Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

Mid-Atlantic Fishery Management Council  
MAFMC  

Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Mr. Ken Hedges  
8153 Cinderella Pl.

Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Jane Butler  
314 Wild Rose Dr  
Hedgesville, WV 25427
Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Mr. Chuck Fisher
919 W L St Apt 10
Benicia, CA 94510
Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Benjamin Warfield
5305 Carefree Drive
League City, TX 77573
Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Barbara Schrier

Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.
