Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Donna Lenhart
2122 New Hackensack Rd
Poughkeepsie, NY 12603
Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Michelle Morris

Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable, poorly-understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

Please safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Ms. Natalie Houghton

Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Lorelei Stierlen

The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Ms. Susan Wayne

Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

joan silaco

Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Roslyn McBride
193 Western Road
Tara, Queensland, 4421
Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Ms. Margaret Masek
225 Town And Country Dr
Danville, CA 94526
Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Mr. Brian Clark
32 Wyncroft Drive
Media, PA 19063
Mid-Atlantic Fishery Management Council  
MAFMC  

Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Hazel Crest, IL 60429
Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration's Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Judy Krach

Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Mr. Brian Fink

Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Karen Berger

Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Regina Hasenkrug
Kanalstr.14
Jersleben, Germany, ot 00000
Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Mrs. d b
2031 franklin ave e #402
seattle, WA 98102
Mid-Atlantic Fishery Management Council
MAFMC

Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Tanya Arguello

Lakewood, CO 80226
Mid-Atlantic Fishery Management Council
MAFMC

Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Mid-Atlantic Fishery Management Council  
MAFMC  

Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems.

Now the Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine, such as deep-sea canyons and other deep areas. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I write to urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This limitation should include mid-water trawl gear, which has clearly been documented to contact the sea floor and damage it.

Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. I ask that no new exemptions be granted beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would actively undermine the objectives of Amendment 16.

Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure that the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Martha Buchan

Mequon, WI 53092
Mid-Atlantic Fishery Management Council
MAFMC

Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Mid-Atlantic Fishery Management Council
MAFMC

Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

emilia boccagna

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Donna Caldwell

This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Michaela Redies
Mecklenburger Str. 4
Darmstadt, ot 64297
Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Mrs. Shelly Shivers
2849 Kingsbury Ave
Richland Hills, TX 76118
Mid-Atlantic Fishery Management Council  
MAFMC

Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Snohomish, WA 98290
Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council begins proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council enjoys an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which documented studies prove contacts the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they rely on most. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan will be effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists discover extensive, beautiful, and previously unknown deep-sea coral gardens.

We only start learning about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Ms. Marcia Halligan
S 4001 River Road
Viroqua, WI 54665/8121
Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Jan Dudek

Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Cristina Llorente

Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. It is great to learn that your care!!!

I am so encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Angela Brooke-Ward

Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Astrid, Theo, Jonathan, Julius Keup
Loehrbachsgraben 5
Allendorf, ot 35469
Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Mr. Rick Eggers  
2208 Eastgate Way  
Tallahassee, FL 32308
Mid-Atlantic Fishery Management Council
MAFMC

Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

Mid-Atlantic Fishery Management Council  
MAFMC  

Dear Chairman Robins and Council Members:  

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Ms. Beatrice Calame

Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Selma Goode

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Mr. Lorenz steininger
Waldstr.
Hohenwart, ot 86558
Mid-Atlantic Fishery Management Council
MAFMC

Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Robert Charnoff
3 Westmoreland Dr
Sterling, VA 20165
Mid-Atlantic Fishery Management Council
MAFMC

Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Hannah Looney

Mid-Atlantic Fishery Management Council  
MAFMC

Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Oak Park, IL 60304
Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Dr. David Brodnax

This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Ruth Neuwald Falcon
13730 15th Ave NE #F203
Seattle, WA 98125
Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Mrs. Phyllis White

Yorktown, VA 23692
Mid-Atlantic Fishery Management Council  
MAFMC

Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Griffin cres
Perth, ot 6152
Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Ash Bradshaw

Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Ms. Gina Rangel
Rua de Seng Tou
Taipa-Macau, ot N/A
Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

robert keenan

Mid-Atlantic Fishery Management Council  
MAFMC

Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration's Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Paul Susak  
1058 Riverview Dr.  
macedonia, OH 44056
Mid-Atlantic Fishery Management Council
MAFMC

Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Lynn Adams

The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

kimberly young

Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Ms Martha Hauer
13110 Log Road
Peyton, CO 80831
Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Janet Rohde

Mid-Atlantic Fishery Management Council
MAFMC

Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Ms. Daniela Rossi

Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Thilde Pedersen

The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Mr. Christopher SEgo

Dear Chairman Robins and Council Members:

I am glad the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable deep-sea corals and their ecosystems. The Council can prevent the expansion of fishing into areas that remain largely untouched. Such protections are compatible with NOAA’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, as well as the Council’s recent efforts to advance ecosystem-based fisheries management.

I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16.

Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to protect these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

Please pass and implement the strongest possible management measures in Amendment 16.

Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Mrs. Patricia Michaeloff
1206 W Pontoon Rd
Granite City, IL 62040
Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

Mount Vernon, OH 43050
My name is Michael Poland and I am a science communicator in the Center for Earth Observation Science at the University of Maryland. I am writing to you as a member of the Mid-Atlantic Fishery Management Council (Merce).

I am a scientist and policy professional with a long history of working on issues related to marine conservation, including the protection of coral reefs. I have been involved in the development of management plans for coral reefs in the Caribbean and other regions, and I have worked with a range of stakeholders to develop strategies for protecting these important ecosystems.

My concern is that the current management plan for coral reefs in the Mid-Atlantic region is not sufficient to protect these ecosystems. I believe that the Council should take a more proactive approach to protecting coral reefs, and I urge you to consider implementing the following recommendations:

1. Designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

2. I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

3. We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Michael Poland

18 E Elm St
Rocky Mount, NC 27804
Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Lani Bauer

The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

martin bugeja

Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Shirley Cupani
10434 E. McLellan Rd.
Mesa, AZ 85207
Mid-Atlantic Fishery Management Council  
MAFMC

Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Gary Sanders
3980 Bibbits Drive
Palo Alto, CA 94303
Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Debz Jones
40-42 High Street, Willingham
Cambridge, ot CB24 5ES
Mid-Atlantic Fishery Management Council
MAFMC

Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Mrs. Mary Masters

Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.
