Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Clairemarie Levine
5413 Valley View Road
El Sobrante, CA 94803
Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Andrea Greco

Matawan, NJ 07747
Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Ms. Kate Crowley  
82119 Bennett Rd  
Willow River, MN 55795
Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

Mid-Atlantic Fishery Management Council
MAFMC

Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Judy and Doug Turk

Thomas Boswell
1927 Woodland Estates Dr.
St. Clair, MI 48079
Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Ms. Beth Waltrip

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Ms. charlyn kinter

Dayton, OH 45414
Mid-Atlantic Fishery Management Council
MAFMC

Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Kelley Scanlon
281 Norwood Avenue
Syracuse, NY 13206
Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Colleen Hamilton

Orange, CA 92869
Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Mr. Paul Hunrichs
8360 Carlton Oaks Drive
Santee, CA 92071

The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, we urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, we support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

We urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Rose & John Martin

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Dorothy Marciano

Mid-Atlantic Fishery Management Council  
MAFMC

Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Linda Reilly

Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. MAFMC

Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Mr. Richard Pasichnyk

The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Mrs. Martha Spencer
988 Henry Mountain Road

This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Allan Wilson

Portland, OR 97218
Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

Dear Chairman Robins and Council Members:  

***  
The following message has been prewritten but we agree with it's contents. Corals at all 
depths need protection from mechanical destruction as well as chemical from 
toxins/pollutants as well as acidity from CO2 absorption from the atmosphere from human 
activities.  

Thanks - Paul Howard and Stacy Drake  
***  

We are encouraged that the Mid-Atlantic Fishery Management Council is taking proactive 
steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The 
Council has an opportunity to prevent the expansion of fishing into areas that remain 
largely pristine. Such protections would be in line with the objectives of the National 
Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge 
Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries 
management.  

Specifically, We urge the Council to designate the proposed 200-meter broad zone and 
each of the defined canyons as off-limits to all destructive bottom fishing gears. This 
should include mid-water trawl gear, which has been documented to contact the sea floor. 
Safeguarding the 200-meter broad zone and canyons will provide the highest conservation 
benefit while allowing current fisheries access to the areas that they most rely upon. There 
should be no new exemptions beyond those in the document, as the risk of opening up 
these sensitive areas to new fisheries or gear types would undermine the objectives of 
Amendment 16. Furthermore, We support the use of new technologies, such as vessel 
monitoring systems, aboard fishing vessels to help ensure the plan is effectively 
implemented on the water.  

We urge you to safeguard these ecological treasures now and for future generations by 
establishing a strong and enduring plan to serve as an example for similar protections in 
New England and around the U.S. and world, where scientists are discovering extensive, 
beautiful, and previously unknown deep-sea coral gardens.  

We are only beginning to learn about these biological communities and their importance to 
other components of ocean ecosystems, as well as their values to humans. Please pass 
and implement the strongest possible management measures in Amendment 16.  

Thank you for your consideration.  

Sincerely,  Paul Howard and Stacy Drake,  
Corvallis, Oregon.  

Paul Howard
Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Katt Sims

Mid-Atlantic Fishery Management Council  
MAFMC

Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

Thank you for your consideration.

Sincerely,

Lana Touchstone

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Linda Martin

Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Ms. Doris Potter

Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Mrs. Cheryl Murphy
258 Turtle Pond Pkwy

Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans.

_This plan MUST include all of the canyons and deep regions that harbor these ecological treasures._

Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Ms. ingrid smith

Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

bernardo alayza mujica
durand bernales
surquillo, IA 51111
Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

christopher tuch

Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Ms. Karen Kindel
5921 Freitag St
Canton, OH 44718
Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Mr. Paul Hinerman
98 ave. n.
seminole, FL 33776
Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Errikka Jordan

Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Mrs. Margo Vanderhill
504 GARFIELD ST
ALTON, IA 51003
Mid-Atlantic Fishery Management Council
MAFMC

Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Paul Riley

6473 E Hilldale Rd
Port Orchard, WA 98366
Mid-Atlantic Fishery Management Council
MAFMC

Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Renae McKeon

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Elisabeth bezemer
2908 N Central Ave
Tampa, FL 33602
Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Patricia Fleetwood  
5203 T.C. Steele Rd.  
Nashville, IN 47448
Mid-Atlantic Fishery Management Council
MAFMC

Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Tracey Quinn

Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

Piercy, CA 95587
Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Ms. Gail Stanley

Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Mr. Jerry Smith

Mid-Atlantic Fishery Management Council
MAFMC

Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Steve Wendt

Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Julia Bazar
1518 Dwight Way Apt 4
Berkeley, CA 94703
Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Shira Lebovich
150 Brighton 15th street

Mid-Atlantic Fishery Management Council
MAFMC

Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Dear Chairman Robins and Council Members:

What an opportunity you have to save the deep-sea coral ecosystems!

Please designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon.

Using new technologies aboard vessels to help ensure the plan happens is another good idea for protecting deep sea corals.

Protect the corals by passing and implementing the strongest possible management measures in Amendment 16.

The future is up to us now. Save the deep-sea corals from destruction!

Thank you for your consideration.

Sincerely,

Ms. Peggy Malone

The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Mr. Jerry Freeman

Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Ms. Bennie Shallbetter  
300 Taylor St  
Smithville, TX 78957
Mid-Atlantic Fishery Management Council
MAFMC

Dear Chairman Robins and Council Members:

It encourages me that the Mid-Atlantic Fishery Management Council will take proactive steps to protect vulnerable deep-sea coral ecosystems. Please grab the opportunity to curtail and prevent expansion of fishing into deep areas that remain largely pristine. Such protections will correspond with the objectives of NOAA's strategic plan for Deep-Sea Coral and Sponge Ecosystems, also with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, we ask the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all bottom fishing gear. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguard the canyon floors while allowing current fishers access to the areas that they most rely upon. There should be no new exemptions beyond those in the document. I do support the use of technologies such as vessel monitoring systems aboard fishing vessels, to help ensure that the plan is effectively implemented.

PLEASE safeguard these ecological treasures now and for future generations! by establishing a strong and enduring plan. Scientists keep discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Dale M. Heckman
Humboldt Ave.
Davis, CA, CA 95616
Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely, help protect the atlantic ocean ecosystem.

Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Mrs. Alicia Kern
27225 Sunnyridge Rd
Palos Verdes Peninsula, CA 90274
Dear Chairman Robins and Council Members:

The Mid-Atlantic Fishery Management Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

PLEASE safeguard these ecological treasures for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans.

PLEASE PASS AND IMPLEMENT THE STRONGEST POSSIBLE MANAGEMENT MEASURES IN AMENDMENT 16!!!

Ms. Julie Glover
7292 Maxwelton Rd
Clinton, WA 98236
Mid-Atlantic Fishery Management Council
MAFMC

Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Mrs. Elizabeth Stange

There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

liu wai ling

Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Mr. Michael Lampi

Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Mid-Atlantic Fishery Management Council
MAFMC

Dear Chairman Robins and Council Members:

***The verdant, kaleidoscopic biodiversity of benthic coral formations are only recently being discerned by science, yet they are already under imminent threat from destructive "fishing" methods. Trawling the ocean floor for fish is not recognizable as "fishing," but is really a form of scorched-earth mining, whereby a small amount of useable fish flesh is taken for all of the living creatures that are crushed underfoot, and must not be allowed in the Atlantic Ocean. MAFMC has an opportunity to keep this ecosystem relatively intact before it suffers the same fate as other, already exploited ecosystems under NMFS governance. In light of the centuries-long biological development spans of benthic coral ecosystems, akin to effectively irreplaceable old-growth forests, MAFMC must not repeat the same error of testing the coral reefs' maximum tolerance for physical injury, only to find this later to be a grievous overestimate.***

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,
Jim Steitz

Gatlinburg, TN 37738
Mid-Atlantic Fishery Management Council  
MAFMC

Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Marcie Brushaber  
PO Box 227  
Reyno, AR 72462
Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Ms. Jody Walters
368 Burwood Ave

The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Mr. Jeremy Schultz

The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

clayton masters

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Michael Lombardi

Levittown, PA 19054
Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Constantine Bogios

Mid-Atlantic Fishery Management Council  
MAFMC  

Dear Chairman Robins and Council Members:  

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.  

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.  

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Mr. Peter Roche
2916-C Avenida Alamosa
Santa Fe, NM 87507
Mid-Atlantic Fishery Management Council  
MAFMC

Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Mrs. kathi brinkman
119 Arcaro Dr
Street 2
Greensboro, NC 27455
Mid-Atlantic Fishery Management Council
MAFMC

Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Mr. Lester Kloss  
18505 Carpenter St  
Homewood, IL 60430
Mid-Atlantic Fishery Management Council
MAFMC

Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Mr. David Parker

Mid-Atlantic Fishery Management Council  
MAFMC  

Dear Chairman Robins and Council Members:  

Thanks for protecting vulnerable deep-sea coral ecosystems.  

The Council could also prevent the expansion of fishing into largely pristine areas, per the NOAA’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems.  

I urge the Council to designate the proposed 200-meter broad zone, and each of the defined canyons, as off-limits to all destructive bottom fishing gears (including mid-water trawl gear, because it contacts the sea floor). Safeguarding this area will provide the best conservation while allowing current fisheries access to the areas they need most.  

The document should have no new exemptions beyond those, because that would undermine the objectives of Amendment 16. I also support new technologies (e.g., vessel monitoring systems) aboard fishing vessels to aid implementation.  

I urge you to safeguard these ecological treasures for future generations via a strong, permanent plan that is a model for similar plans everywhere, because scientists keep discovering extensive, beautiful, and previously unknown deep-sea coral gardens.  

We are just starting to appreciate these biological communities and their importance in ocean ecosystems.  

Please implement the strongest possible management measures in Amendment 16.  

Thanks.  

Sincerely,  

Ned Flahety

MAFMC

Dear Chairman Robins and Council Members:

I am encouraged that the Mid-Atlantic Fishery Management Council is taking proactive steps to protect vulnerable and poorly understood deep-sea coral ecosystems. The Council has an opportunity to prevent the expansion of fishing into areas that remain largely pristine. Such protections would be in line with the objectives of the National Oceanic and Atmospheric Administration’s Strategic Plan for Deep-Sea Coral and Sponge Ecosystems, and with the Council’s recent efforts to advance ecosystem-based fisheries management.

Specifically, I urge the Council to designate the proposed 200-meter broad zone and each of the defined canyons as off-limits to all destructive bottom fishing gears. This should include mid-water trawl gear, which has been documented to contact the sea floor. Safeguarding the 200-meter broad zone and canyons will provide the highest conservation benefit while allowing current fisheries access to the areas that they most rely upon. There should be no new exemptions beyond those in the document, as the risk of opening up these sensitive areas to new fisheries or gear types would undermine the objectives of Amendment 16. Furthermore, I support the use of new technologies, such as vessel monitoring systems, aboard fishing vessels to help ensure the plan is effectively implemented on the water.

I urge you to safeguard these ecological treasures now and for future generations by establishing a strong and enduring plan to serve as an example for similar protections in New England and around the U.S. and world, where scientists are discovering extensive, beautiful, and previously unknown deep-sea coral gardens.

We are only beginning to learn about these biological communities and their importance to other components of ocean ecosystems, as well as their values to humans. Please pass and implement the strongest possible management measures in Amendment 16.

Thank you for your consideration.

Sincerely,

Mr. Darren Frale
