# A WHOLE NEW FEELING

**MOD.2**™ With a history of innovation and shooter-centric XD® design, Springfield Armory® has left an indelible mark on the world of polymer framed handguns. In the course of a little more than a decade, the first name in American firearms has proven without a doubt that the shooting experience can be continually improved.

Having achieved so much, some might be content to sit back and enjoy the fruits of their labor. But at Springfield Armory®, our ethos is one of a tireless, dogged pursuit of betterment. That's why we are proud to introduce the XD® Mod.2™.

Mod.2™ is the refinement of a classic, a distillation of greatness. Those things that made the XD® what it is remain and are amplified, revised or improved in order to bring you the next step in the evolution of the polymer framed pistol.

In Mod.2™, shooters will find that critical aspects of the design have been fine-tuned. Mod.2™ ergonomics are a next-level experience that you have to feel to believe and understand. The entire interface between the shooter and the gun has been updated, while retaining the Point & Shoot characteristics that made it famous. Key features have been tweaked and enhanced to further enable effortless shooting. And you'll find that the overall package is now more concealable as well.

So whether you're a long-time XD® aficionado or you're in the market for your first handgun, you're going to want to get your hands on an XD® Mod.2™. Come see what happens when you start with a proven design and ask the industry's best and brightest to make it even better.

The XD® Mod.2™ from Springfield Armory®. *FEELING IS BELIEVING.*

## FRAME FEATURES WORKING IN UNISON TO OPTIMIZE INTERACTION BETWEEN THE HUMAN HAND AND PISTOL.

**GRIPZONE**™ Every time you pick up an XD® Mod.2™ pistol, you'll enter the GripZone™. And while you're there, your shooting experience will change in ways you might not notice. Industry leading ergonomics are like that. A tool should be so easy to use that you don't even think about it until you set it down with the dawning realization that you didn't have to work against it.

But what is the GripZone™? Simply put, it's every surface on the frame that makes contact with your hand. The GripZone™ has been carefully, intentionally designed to combine multiple principles of biomechanics in order to enhance your shooting experience.

First, the circumference of the frame has been reduced to augment the shooter's grip. The grip has been completely re-contoured to better fit the hand. Grasp performance is enhanced because the hand has to stretch less in order to maintain control of the pistol. This new, optimally shaped and sized radius is small enough to maximize your ability to hold the gun with minimal effort. At the same time, it's large enough and shaped such that your hand will feel naturally positioned, allowing you to maintain a point and shoot experience.

A fundamental of good shooting is consistency, and it's hard to be consistent when your grip changes from shot to shot. Thus, the second element of the GripZone™ is that it targets three distinct areas of contact for

increased friction. On the frame of the pistol you will find three specifically molded textures, each placed exactly where your hand needs it the most in order to keep the pistol from shifting. Zones 1 and 2 have textures that are nearly indistinguishable to the naked eye, yet are different enough that they are placed to have specific effects. Zone 1 is a crucial contact point between the frame and the second joint of the fingers. Zone 2 is an area of secondary contact. These two Zones were identified by our engineers as the parts of the hand/pistol boundary where added slip-resistance would be the most beneficial. Zone 3 covers the rest of the frame, and you will find that it is textured to supplement the positive purchase created by the first two Zones.

The GripZone™ has improved grasp performance and stickier grip characteristics so that your hand will be less prone to torque, wrench and lever the pistol as you aim. The pistol will naturally tend to stay in position due to the increased traction of the innovative textures. Additionally, you'll be applying less force to the frame. This is ergonomic science applied where it matters most – to the interface of the shooter and the firearm.

Learning, adapting, and improving are all wonderful outcomes of experience. And our particular experience in the field of ergonomics means that you get to enjoy shooting more. We hope you're as happy with the results of applied science as we are.

Welcome to the GripZone™.
