The Right Questions Lead to the Best Solutions

Does the organization have a clear technology infrastructure roadmap for enabling remote work?

- Optimizing Workflow
- Managing work force Productivity
- Enabling secure work
- Strengthening Org Culture
The Right Questions Lead to the Best Solutions

How much of the workforce has the flexibility to work from home?

- Employee policies allowed employees to work from home on a regular basis
- Work from home technologies were understood and exercised
The Right Questions Lead to the Best Solutions

What Specific Network Issues Require Resolution/Optimization?

• Office connectivity allows access to critical business systems and tools?

• Is the connectivity redundant, reliable and secure?

• Is it autonomous? Autonomous means having your own ASN and IP addresses to enable multihoming capability
Spotlight on Network Autonomy

• Autonomous means **having your own ASN and IP addresses** to enable quick provision of new connectivity without relying on your current provider.

• Autonomous means **having your own ASN and IP addresses** to enable connectivity to peers and Internet Exchange Points (IXPs).
Spotlight on Residential Connectivity

Do remote workers have enough bandwidth to provide reliable connectivity? (In the New Normal entire neighborhoods may also be working from home)

• How many homes have network redundancy…or even the ability to have redundancy?
• Are home connections secure?
COVERING ALL THE BASES!

- BACK UP POWER: UPS, Generators, Fuel
- EQUIPMENT: Monitors, keyboards, cables, dongles, track pads
- WORKING ENVIRONMENT: Desk, chair, lighting
- IT SUPPORT and access to business tools
