## DESCRIPTION

MW=16.9 kDa. Full length calmodulin, cloned from human cDNA with a C-terminal purification tag, expressed in E. coli. The protein consists of the human calmodulin (residues 1-148, swissprot accession P62158) with the mutation N60D. The C-terminal tag is cleaved during the purification.

## PURITY

> 95% by SDS-PAGE. The protein was observed as a single band migrating at a molecular weight of between 19.5 and 14.4 kDa.

## SUPPLIED AS

1.0mg/ml in Tris 20mM, pH 8.0, NaCl 150mM, CaCl<sub>2</sub> 2mM, Complete Protease Inhibitor Cocktail EDTA-free (Roche). The concentration is calculated from the absorbance at 280nm ( $\epsilon_{280} = 2980 \text{ M}^{-1}\text{cm}^{-1}$ ).

## CHARACTERISTICS

Under the above described conditions, to avoid precipitation or protein dimerization, the product can be concentrated to a maximum of 2mM.

## STORAGE

-20°C. The protein is stable at 4°C for at least 2 weeks and at 25°C for at least several hours. After initial defrost, aliquot product into individual tubes and refreeze at -20°C.

Avoid repeated freeze/defrost cycles.
