

Project Size: 1.5 acres

RAI was employed to incorporate the following elements:

- Lawn area for outside play
- Masonry terrace to replace a deteriorated deck
- Secluded hot tub terrace
- Low maintenance shade garden
- Water feature

Awkward grade changes posed challenges to the terrace design and kitchen access.

A creek bed and its floodplain along with invasive shrubs, vines and ground cover limited improvement options.

A series of arcs and offsets around the primary terrace comprise the overriding design concept with a masonry wall that wraps around the primary terrace and elevates the adjacent landscape plantings.
