

Project Size: 2.5 acres

The slope of the yard and proximity of the neighbors home proved challenging but prompted the creative design solution.

The client's program included:

- Create a level soccer practice yard with a masonry wall on one side
- Buffer views of neighbor's home and landscape to the north
- Situate and specify a children's play structure
- Design a strolling garden from the home to the lake

A long masonry garden wall performs several functions:

- Allows soccer practice on the southside
- Protects the strolling garden on the northside from stray balls
- Buffers the neighbor's property from view
- Orients terrace views toward the lake
