Without Gripper

With Gripper

Fitting Rods To Stair

- Stargrip can be 'Retro Fitted' onto a stair carpet that has been fitted using gripper to give an appealing decorative look to the staircase.
- When cutting to size cut off each end to keep the fixing hole spacing even.
- On a new installation the Stargrip can be used instead of gripper to fix the carpet to the stair. The action of screwing the Stargrip through the carpet stretches the carpet and holds it firmly in place.
- After fitting the screws are hidden by applying the pre-taped inlay in the recessed channel.
- Stargrip are supplied with number 6 screws and you must drill a pilot hole before fixing the brackets to the stair. For softwood create a 2.5mm pilot hole and for hardwood create a 3mm hole. A clearance hole of 4mm should be drilled to accommodate the screw shank. Remember to set your power drill on a low torque setting to avoid breaking the screws.

Care and Maintenance

- We recommend using a damp cloth to keep the rods clean, any household cleaners used to clean the wood and paint work of the staircase should be applied to the cloth and not directly onto the surface of the stair, as over spray can cause a speckled tarnish on the rods. If any liquids are inadvertently spilt on the stair rods they should be cleaned immediately with a damp cloth and dried with a clean cloth.
