

Fully adjustable boat cradles

Portable boat cradles that are fully adjustable to cater for boats from 5-20 tonnes are built to order by the Engineering Department of ML (UK) Ltd.

The ML boat cradles are adjustable for height and width and are strongly constructed with a fully galvanised finish for long life in a marine environment. The hinged support plates have high density rubber pads to protect hulls.

Of particular benefit to marina and boatyard operators is the fact that various designs can be produced to suit different models of boat moving equipment.

Mould treatments for marinas and yacht clubs

The damp environment in shower cubicles, toilet facilities and laundry rooms has always encouraged the growth of black mould and where there is a salt-laden atmosphere the condition is made worse as a film of salt will attract and hold moisture on the internal and external walls of buildings.

FLAG Paints Ltd, which manufactures the FLAGship range of anti-fouling, uses biocide technology to produce a complete range of industrial paints to banish black mould from internal walls and prevent the growth of green or black algal on the outside of harbour buildings.

The company supplies a range of eight different treatments under the Asipo brand name, including a strong algicidal wash, matt or silk emulsion paints for internal use and Asipo All Weather Coatings for outside applications.
