

GERM KILLING PAINT

ASIPO is the name of a series of high quality decorative paints with outstanding protection against mould and fungus growth. ASIPO paints are the result of a revolutionary process developed by many years of research and proven effective by several years use under severe conditions by many specialist companies and local Government Authorities.

ASIPO paints are different from old fashioned fungicidal paints because they do not contain arsenic, copper, lead, mercury, or similar poisonous substances. A chemical reaction in-situ continuously forms a substance within the ASIPO film, which kills all kinds of microbes, germs, bacteria, moulds and fungi and yet is completely harmless to human and animal life. ASIPO is a major development in protective coatings to resist mould, yeast and fungus attack under the most rigorous conditions. All Asipo products are non poisonous.

The ASIPO active substance is an integral part of the paint film and cannot be leached out even by repeated and prolonged washings. It cannot evaporate from the film as it has practically no vapour pressure. Therefore, the fungicidal activity continues as long as the paint film is not damaged.

ASIPO paints do not cure dampness or condensation – this generally requires structural alterations – but ASIPO does prevent recurrence of mould and fungus growths even where the ceilings and walls are dripping wet.

ASIPO ALGICIDAL TREATMENT

For cleaning the surface and killing all visible signs of mould.

ASIPO BARRIER

For use in extreme cases. Forms a barrier within the plaster on a wall or ceiling to prevent the mould spores reappearing on the surface.

ASIPO INTERNAL EMULSION

Safe and easy to use high strength fungicidal decorative finishes - the ultimate mould growth deterrent.

ANTI MOULD

ASIPO active ingredients have a broad spectrum of anti-fungal and anti-algal activity including efficacy against the following organisms:

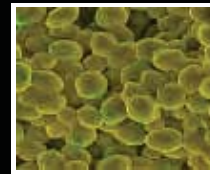

Moulds

Alternaria Alternata
Aspergillus Niger
Aspergillus Versicolor
Aureobasidium Pullulans
Cladosporium Cladosporoides
Penicillium Funiculosum
Penicillium Purpurogenum
Phoma Violaacea
Ulocladium Atrum

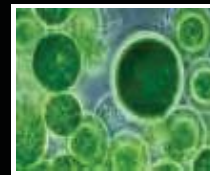

Yeasts

Candida Albicans
Rhototorula Ruba
Saccharomyces Cerevisiae

Algae

Chlorella Emersonii
Gloeocapsa SP
Nostoc Commune
Pleurococcus SP
Scenedesmuc Vacuolatruss
Stichococcus Bacillariss
Stigeoclonium Tenue
Trentepholia Aurea
Trentepholia Odorata

B E N E F I T S

- Absolutely non – poisonous
- Destroy all germs, mould and fungi
- Remains active – built in to the coating
- Harmless to humans and animals
- Drastically reduces risk of cross infection
- Top grade decorative paints in a variety of finishes
- Very easy to prepare, use and apply

THE ASIPO RANGE

Mould is commonly caused by condensation and general damp conditions. Dormant mould spores can germinate and spread rapidly, resulting in unsightly and often extensive growth of dark coloured mould. Mould needs very little nutrient to remain active, and can grow on walls and ceilings irrespective of the decorative finish. Mould spores will also spread into the air resulting in a musty smell and more importantly a serious health risk. If left untreated, mould can cause extensive damage to walls and ceiling areas. Active mould spores can also attack clothes, furnishings and carpets. The Asipo range offers highly effective, economic and safe solutions, with a wide range of finishes for internal and external applications. Asipo products can be over-coated using standard paints and wallpapers.

INTERNAL

Asipo Internal, Matt or Silk: A superior water based decorative emulsion for combating internal mould growth problems. Can be used as a stand alone product, or as part of the Asipo Mould Eradication System.

Asipo Algicidal Treatment: A clear water-borne algicidal wash concentrate. A very effective biocide to kill lichens and algae. Long term protection against regrowth.

Asipo Barrier: Forms a barrier within the plaster to prevent mould spores from reappearing.

Asipo Dampstain Proofer: To seal the surface and prevent stains coming through decoration. (special order item)

EXTERNAL

Asipo Fine Texture Masonry Paint: A superior water-based decorative emulsion for external use. Provides long term protection against mould and algae. (special order item)

Asipo All Weather Coating: Pliolite based reinforced, flexible, micro-porous coating with excellent self cleaning properties. (special order item)

Asipo Algicidal Treatment: A clear water-borne algicidal wash concentrate. A very effective biocide to kill lichens and algae. Long term protection against regrowth.

Asiposeal: Non silicone based, single pack solvent borne clear coating used to seal external masonry areas. Stops water penetration. (special order item)
