BIOGRAPHICAL SUMMARY

I am currently appointed Professor of Addictive Behaviours and Mental Health in the School of Applied Sciences at London South Bank University where I am the Head of the Division of Psychology and Deputy Lead of the Centre for Addictive Behaviours Research. I am also a Visiting Researcher at the Institute of Psychiatry, Psychology & Neuroscience King's College London, a Visiting Professor of Psychology at the Sigmund Freud University Milan/Vienna, and a Director of UK SMART Recovery and SMART Recovery International. Prior to my current appointment I was Professor of Psychological Therapies in the School of Health and Social Care at London South Bank University and Consultant and Trust Lead for North East London NHS Foundation Trust. Before joining London South Bank University, I held Principal Lecturerships in Psychology at the University of Roehampton and at London Metropolitan University. I have also been working as a clinician specializing in cognitive behaviour therapy and metacognitive therapy for the last twenty years in both community mental healthcare organisations and in private practice.

My research has focused on understanding the metacognitive mechanisms underlying general vulnerability to addictive behaviours (alcohol use, gambling, nicotine use, and engagement with technology). In this area I have conducted seminal studies that have identified the key role played by metacognitions in the maintenance of such behaviours and have also defined and shaped the novel concept of 'desire thinking', a third form of perseverative thinking (beyond rumination and worry) which is linked to the persistence and escalation of craving. This body of work has led to the development of a novel clinical model which integrates knowledge on attention, perseverative thinking and metacognition into a single 'architecture' aimed at explaining the unfolding of addictive behaviour and the application of metacognitive focused techniques in its treatment. I am now leading research on testing the efficacy of metacognitive focused therapy protocols for addictive behaviours.
