

## HOW TO DOWNLOAD/PRINT YOUR MEDICAL RECORDS VIA PATIENT FUSION:

Step 1: log in at <https://www.patientfusion.com/> preferably from a computer rather than a mobile device as these functions may not work on a mobile device (phone, tablet)

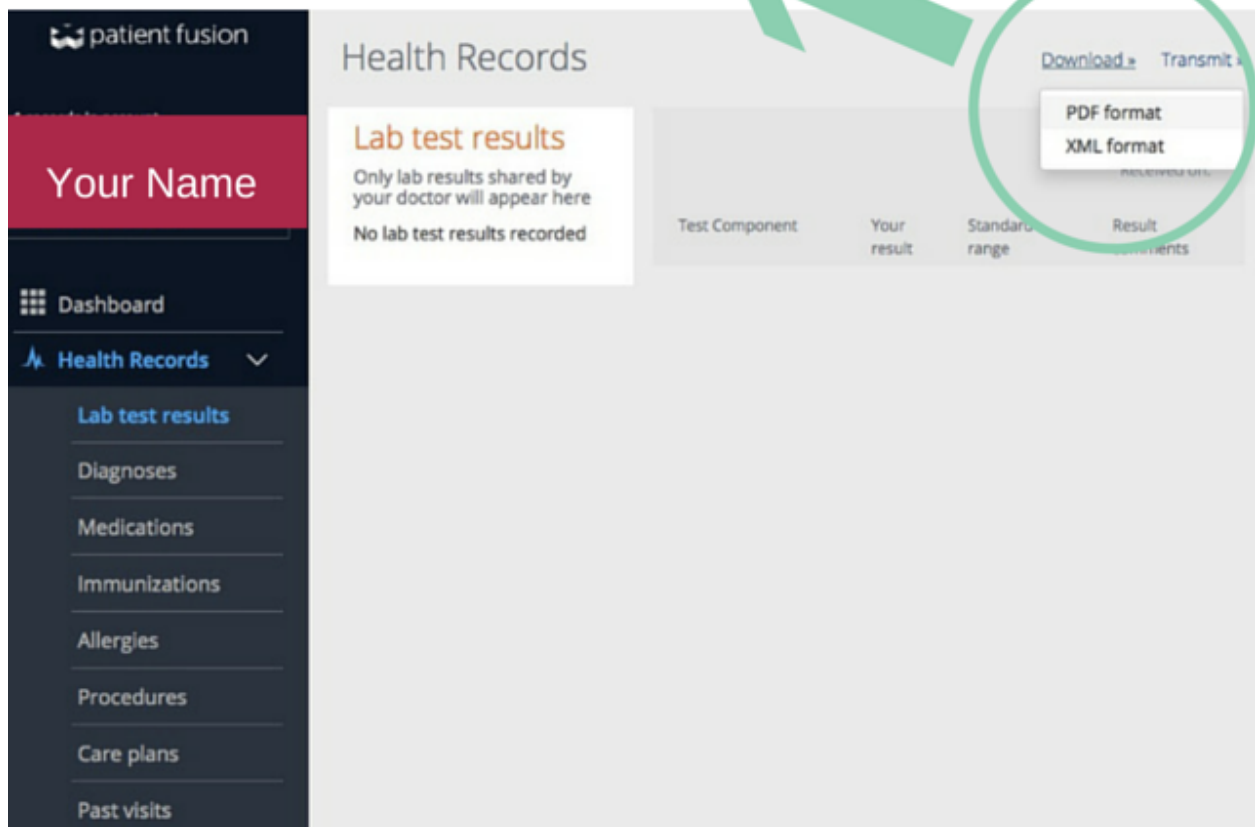

Step 2:

Click on "Health Records" and you will see access to your records, except for most labs, which you already have hard copies of.

Step 3:

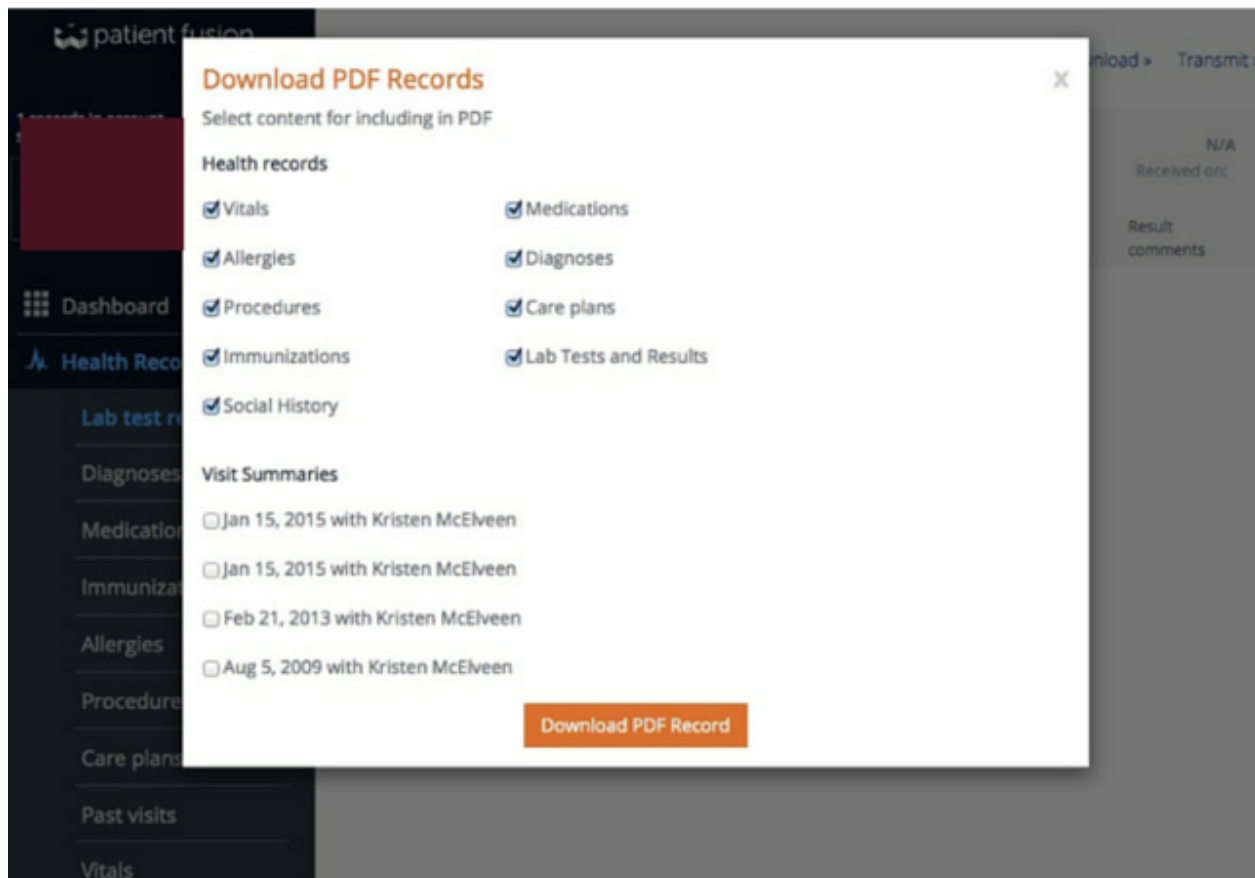

Click on "Download" and  
choose "PDF format"

I prefer you use the PDF format. If you would rather have the XML format, I will need to create the document before you can access it, so please call so we can discuss it.

Step 4:

Then check the boxes of all the info you want and click the "Download PDF Report" button at the bottom.

Once you have done this, a copy of the report will be downloaded to your desktop or downloads folder (wherever your default is for files downloaded from the internet).

You will need Adobe Reader (you can download it free here: <https://get.adobe.com/reader/>) to view the document and print it out, otherwise, you can just keep it as a file on your computer or copy it to a disk. Just keep in mind that this is your medical information, so for optimum security, it's best to print it out or copy the file to a disk, then delete this file securely off your computer.
