Definitions

<p>All Channels:</p>	<p>Represents all channels provided by Rovi. This includes (including outlying U.S. territories) and channels in measured markets (see non-reported channels below.) Currently, TRACOM reports reporting PBS as their primary or secondary affiliate stations which run at least some public television content.</p>
<p>Main & Sub Channels:</p>	<p>Main/Sub channels indicate how stations are multicasted. The main channel is the signal that carries the primary programming. Sub channels are generally special-interest channels. In New York, WNET DT (channel 13.1) is the main channel and WNET Vme (13.3) are sub channels.</p>
<p>Primary & Secondary Channels:</p>	<p>In markets where multiple PTV stations exist, the primary channel is the station that is the primary channel in the market; and generally the PBS affiliate, run by the station. In New York, WNET is the primary channel as it draws content from PBS. WLIW and WEDW are marked as secondary channels as they get this content as acquisitions rather than from PBS.</p>
<p>LPM, Metered & Diary Channels:</p>	<p>Measurement Type indicates how Nielsen collects ratings. Currently split into 210 Designated Market Areas, or 25 LPM Markets in which an automated unit collects information from viewers. Another 31 markets use set-top boxes to view automatically, while demographic information is collected from Set Meter markets are known collectively as Metered markets are measured using pen-and-paper diaries, while diary markets are measured using pen-and-paper diaries, while diary markets are measured using pen-and-paper diaries, while diary markets are measured using pen-and-paper diaries, while diary markets are measured using pen-and-paper diaries.</p>
<p>Digital & Analog Channels:</p>	<p>As of June 2009, the majority of stations ceased all analog, ATSC signals. Some channels in rural areas still broadcast analog signals. The Channel/Market List at our website (http://www.rogov.com/Carriage/StationList/Default.aspx) contains all available channels by market type.</p>

<p>Transmitter & Repeater Channels:</p>	<p>Signal type indicates whether an individual channel antenna, or a repeater which picks up the signal from it to an area farther away in the market. In Tucson, KUAT is a parent (the parent) while KUAS is a repeater (the child) and repeats its range. Nielsen often groups these parent-child ratings and adds the repeater's audience to the parent, denoted as KUAT+ = combined ratings for KUAT and KUAS.)</p>
<p>Reported & Non-Reported Channels:</p>	<p>A reported channel's ratings are tracked by Nielsen Overnight data (note - Overnights data is only collected for reported channels). Main channels are generally all reported by Nielsen. If a station has an agreement with Nielsen for carriage, TRAC collects and reports airings for all stations, however non-reported channels will not appear in Nielsen's data.</p>

includes areas not measured by Nielsen
