DEFINING SPACES

"To keep with our design philosophy of bringing the contemporary and modern to the historical and traditional architecture of this home, we purchased all new windows, but painted them black to resemble steel," says Baker. "This provides a look and feel as though they've been there for a while."

MIX MASTER

An inviting open kitchen by Regan Baker Design seamlessly blends the old and the new.

The word eclectic can often conjure up an unflattering visual mishmash. But when disparate styles come together in harmony, the results are worth celebrating! Such is the case with this kitchen by Regan Baker Design (reganbakerdesign.com), located in San Francisco's West Clay Park enclave. "The design philosophy was to blend the traditional architecture and historical details of the home with the client's contemporary, eclectic and tribal style," says Baker. The durable finishes and open floor plan speak to the homeowners' family-friendly lifestyle, as well as their wish for a cool-yet-inviting space. "We added interest with the patterned Fireclay tile and warmth with navy blue cabinets, which made the space more modern and fun," says Baker, who considers navy a neutral. Another important component? "Light fixtures can be as powerful as artwork, and can easily make a space more contemporary," adds Baker. "We are head over heels with the Currey & Company fixture in the dining room and the pendant from Erich Ginder Studio over the round kitchen table."
