

MAP ice™

Custom Engineered Plastic Skating Rink Floor Liners

Trends

Ice skating is no longer dependent on location or seasonal conditions. People can now enjoy skating almost anywhere at any time of the year!

Setup and maintenance costs of traditional ice skating rinks are very high, especially on short-term or temporary installations. Synthetic skating rink floor liners are easier to install, service, and are reusable. They eliminate energy consumption, have a long life span, and are recyclable; making our rink liners an environmentally friendly & economic alternative to traditional rinks.

What is MAP ice?

MAP ice has been developed from the ground up for skating rinks. It is a polyethylene material designed with optimal and durable sliding properties. A unique pressing process of raw materials and an integrated lubricant grants this product self-lubricating properties which exceed other synthetics, and eliminate the need to add external lubricants. In addition, skating rinks lined with **MAP ice** can be used 365 days a year, independent of weather or temperature conditions.

Benefits

- **Significantly Improved Skating Realism (55% Better Than Competition)**
- **Eliminates Energy Consumption to Maintain Ice**
- **Long Product Life**
- **Reusable and Recyclable**
- **Easy Installation and Maintenance**
- **Easy to Clean**

Availability

MAP Ice is available in 3ft x 3ft or 3ft x 9ft E-Z Install Sheets.

Custom sizes are available upon request.
