

Mississippi River Public Dock Project - Chad Chenier Photography

Want to thank **Post Architects**, **EBR Architectural Services Division**, **Downtown Development District**, **Arrighi Construction**, and **ShadeFLA** for their work to get this project developed and highlighted. Special thanks to **Lisa Nice** for coordination and happy to help highlight this project!

The City of Baton Rouge hired Post Architects to design a shade structure for the many (and growing) riverboat passengers debarking at the public dock. In addition to providing the needed shade on the dock, the design goals included enhancing the existing steel structure to provide a proper and memorable welcome to our capital city. Post Architects worked on design options with a specialty fabric structure company, ShadeFLA, to ensure an efficient and beautiful design. The City contracted with Arrighi Construction to complete the installation. The user agent for the City, the Downtown Development District, is working on programming events on the dock and will be looking at adding furniture so residents can relax in the shade and enjoy views of the mighty Mississippi!
