

ENVIRONMENTAL POLICY

EcoDomo LLC has made a commitment to the environment. Our objective is to import and distribute exclusively products which are made from sustainable resources – either recycled, reclaimed, or re-used.

Our commitment to the environment extends past our raw materials. We believe in keeping all of the environments we meet with directly, or indirectly, safe be they working environments or living environments. This commitment extends to the communities from which we import and our own personnel through a functional and driven corporate social responsibility program.

We believe in creating a safe environment for our workers. We believe in the continued search to find sustainable harvested ingredients that occur naturally and will provide jobs to areas that are destroying their habitats to preserve employment.

We believe that one way of caring for our environment is by wisely using our limited resources to create items of beauty, function, and permanence. In this respect, EcoDomo as a corporation has programs which go beyond the import of products:

- Our products are prima facie “green”;
- Our operations are “carbon neutral” – we invest in the replanting of trees to offset the carbon dioxide we generate through our travels, the products we import, and the operation of the company (visit www.TIST.org);
- We invest a percentage of our profits in communities where the product originates;
- We strive to use recycled or renewable materials in our business, such as soy-ink printers, recycled papers and other materials, using low-VOC products in our offices;
- We invest resources in training our personnel, our partners, industry associations to improve the level of awareness on environmental policies, markets and impacts;
- We conduct continuous R&D to improve the level of sustainability of our products and what is used to maintain or install them.

We have a responsibility to make our world a place in which we want our children and grandchildren to grow. The American Indians had a way of looking at the decisions they made - how will it affect the seventh generation. We want to make decisions that will positively affect the seventh generation.

What we build with our limited resources should be cared for with appreciation. In doing so, we'll help assure our continued existence on this earth and we invite our suppliers, clients, dealer, and industry associates to do the same.

We don't have all the answers and welcome suggestions and recommendations on how we can improve our own business operation and products.

EcoDomo integrates the costs of being “green” as a standard cost of doing business. We consider paying rent or phone lines as a necessity – just as using recycled paper, wind power, and buying carbon credits.
