Shoreline Plantings
Let nature do the work for you!

Sit back, relax, and let nature care for your waterfront property. That's right - we're giving you permission to let your yard run a little wild.

Many people feel pressure to keep their yards tidy by mowing the grass down to the water's edge, building retaining walls or removing shrubs and tall grasses.

In reality, a buffer of native plants including flowers, grasses, shrubs and trees is easier to maintain, helps to prevent erosion and keeps the water cleaner.

Why plant your shoreline?
Deep-rooted plants, shrubs and trees:
- Stabilize shorelines and streambanks
- Reduce pollution to lakes, rivers and streams
- Discourage geese from congregating
- Attract birds and butterflies
- Provide habitat and shade for fish
- Never need mowing, fertilizer or pesticides
- Help stop algae and aquatic weeds from growing

Long Lake shoreline planting
Brown’s Creek Watershed District

Hoary vervain, yellow coneflower and black-eyed susans - Blue Thumb

Unlike turf, native vegetation requires no mowing, watering or chemical applications.

The plants’ roots prevent lakeshore erosion and streambank slumping.

Lake Josephine shoreline planting
Blue Thumb - Rice Creek Watershed District

Big Carnelian shoreline planting
Carnelian-Marine-St. Croix Watershed District

You can still have a dock or trail to the water while keeping the rest of your shoreline in a natural state.

The wider the native plant buffer the better, but even a small buffer is better than nothing.

Blue Thumb

St. Croix River
Washington Conservation District

Native plants clean polluted runoff and provide fish, bird and wildlife habitat.

Less polluted runoff means less algae and safer water for fishing and swimming.
