

Expanding Mobile Coverage.

Qypsys provides turn-key solutions for the distribution of wireless service provider voice and data services in buildings and venues through the implementation of Distributed Antenna Systems (DAS).

Distributed Antenna Systems (DAS)

Qypsys offers wireless solutions which helps meet the ever-growing coverage and capacity demands. Distributed Antenna Systems allow users to obtain wireless voice and data coverage in areas of little to no coverage. We have the technical expertise to manage and implement your wireless in-building solution from start to finish. We are trained in all the major DAS equipment such as Mobile Access, TE, Comscope and Solid.

Qypsys has the right mix of talent with years of combined experience and hundreds of DAS installs under our belt. We design, test, and manage the implementation of DAS solutions for wireless carriers, building owners, DAS leasing companies, etc.

Superior Infrastructure Services

For our clients, we develop the most optimal solutions to improve network capacity and coverage. Our process is as follows:

- Site Survey and Review of Building Floor Plans
- Discuss Coverage Objectives
- Feasibility and Pre-Budget Analysis
- Initial Design
- Pre-Construction Survey
- Final Design
- Carrier Approval
- Installation
- Commissioning
