Do the same drench ingredients always give the same result?

NO! According to NZ research published in the international journal “Veterinary Parasitology”

Cattle were tested for faecal egg reduction on 6 different farms comparing different drench treatments

- Eclipse was the significantly superior pour on achieving average egg reduction of 98% in a tight range, the lowest result being 93%.
- The other pour on brand gave an average egg reduction of 85% with a wide range of performance, some results being as low as 40% egg reduction

Trial by Leathwick et al, Veterinary Parasitology, 2016

The Veterinary Centre stocks proven animal health products that we know will perform. We will always be competitive but never at the expense of quality or productivity.

Calf De budding Service

We offer a gold standard calf de budding service using both sedation and local anaesthetic to minimise calf discomfort and reduce liveweight losses due to stress. While sedated, it provides a great opportunity to check the calf for extra teats, give a 10 in 1 vaccination and NAIT ear tagging.

FEE $7.59 (this includes the price of the anaesthetic)
* plus travelling cost
* a surcharge applies if fewer than 25 calves are de budded.

Elanco
Rumensin
ANTI-BLOAT CAPSULES

1. Monensin is a rumen modifier which changes the rumen microflora in such a way that bloat is prevented.
2. Rumensin treated cattle have 7% more energy released from the diet.
3. New Zealand trials have shown a 15% weight gain advantage in treated beef cattle.
