# TAPSTER

## CONGRATULATIONS

on your purchase of Tapster, the latest stage in the evolution of our classic tremolo pedal.

To create Tapster, we started with all the seductive vintage tone guitarists love about the T-Rex Tremster. Then we added tap tempo control, so you can adjust the rate of your tremolo as you play. Finally, we engineered the perfect Subdivision switch to give you even more control over your sound.

## TAPSTER CONTROLS

With its revolutionary tap tempo control, Tapster is built to give you complete control, even while playing on stage. Start by dialing in some basic settings:

Set the **DEPTH** to determine the depth of your volume oscillation.

Adjust the **RATE** control to get just the right oscillation speed.

Use the **VOLUME** control to set overall volume. At twelve o'clock, the volume level is 1:1. Turned all the way clockwise, the input signal is boosted 15dB.

Choose a **SUBDIVISION** of the beat (quarter note, eighth note, or eighth note triplet) to determine your tremolo groove.

Now, once you've set your Tapster up the way you like it, you're ready to use the **TAP TEMPO** control:

**TAP TEMPO** works just like the tap tempo control on a T-Rex delay. Simply tap the switch to the beat, and the rate of your tremolo will sync up with tempo of song you're playing.

It couldn't be easier!

TECHNICAL SPECIFICATIONS	
Input Impedance @ 1KHz	Higher than 1M Ohm
