Southern Plains Transportation Center Seminar Series 2020 Presents:
TxDOT’s Use of Non-destructive Testing tools for Selecting the Optimal Pavement Rehabilitation Strategy

January 31, 2020 10:00 am - 11:00 am
Oklahoma Department of Transportation Commission Room
200 N.E. 21st Street, Oklahoma City, OK 73105

This seminar will describe the tools that were developed in the TxDOT research program and are now used on a daily basis around Texas. These include Ground Penetrating Radar, Falling Weight Deflectometers and a Rolling Dynamic Deflectometer. The use of these tools in evaluating and designing Full Depth Reclamation projects, conducting failure investigations and in generating 10 year rehabilitation priorities for important highway corridors will be demonstrated in a series of case studies.
