

All-On-4

treatment concept

What is All-On-4 technology?

All-On-4 technology is an advanced technique whereby a whole arch of teeth is supported by only 4 implants (in rare cases, up to 6 implants). It can be used for either upper arch, lower arch or full mouth restoration.

How is All-On-4 technology different from traditional dentures?

As opposed to dentures, All-On-4 technology is a fixed/non-removable solution that look and feel like natural teeth, which means they:

- Are stable teeth that are brushed and cleaned like natural teeth
- Do not have to be taken out and cleaned each night
- Do not need messy, sticky adhesives
- Do not press down on your gums, preventing discomfort
- Allow for you to taste and experience the hot / cold of your food
- Do not cause you to gag
- Allow you to bite with increased force, which means you can eat all of your favorite foods
- Prevent bone deterioration
- Renews a youthful appearance through bone level stabilization
- Enhances self-confidence and overall quality of life
- Creates a whole new smile in just ONE day

What are advantages of All-On-4 technology?

- Tooth distribution is maximized. A functional arch of teeth can be supported by a reduced number of implants.
- Bone deficiencies at the back of the jaw are avoided. Complex grafting procedures, sinus lifts, and extended healing times are no longer necessary.
- The replacement teeth are placed immediately. Immediate oral rehabilitation is now possible without patients having to go through an intermediate removable denture phase.
- Using only 4 implants means reduced cost, reduced surgical complexity and long term, easier cleaning and maintenance.

What are the advantages of All-On-4 versus traditional dentures?

- No lengthy surgeries / treatment
- Results are achieved at one appointment
- It is a fixed / non-removable solution
- No gagging
- No lisp
- No dietary restrictions
- Clean like natural teeth; no overnight soaking
- Minimal bone loss

All-On-4 technology results in similar success to those of traditional implant techniques. For the vast majority of patients, All-On-4 overcomes several of the problems associated with existing techniques such as dentures and implant supported dentures.

Who is a candidate for All-On-4 technology?

All-On-4 can be used for patients who have already lost or are about to lose all of their upper or lower teeth. A CT scan is used to determine final candidacy criteria.

Let's get started. What's next?

1. We schedule a CT scan through one of our trusted partners to verify All-On-4 technology is an appropriate solution for you.
2. If it is determined you are a candidate for All-On-4 technology, 6 Day will schedule a convenient appointment time for you.
3. You arrive in the morning for your appointment and leave that afternoon with a beautiful, fixed / non-removable smile solution!

Upper Restoration

Lower Restoration
