FOR IMMEDIATE RELEASE:

GTC Celebrates Completion of Two Projects in Denver and Kersey

GTC recently celebrated completion of two projects, one for Regis University and the other for the Platte Valley Fire Protection District.

The Clarke Hall project on the Regis University campus is a new 82,291 square foot, 4-story general academic office building designed by Soderstrom Architects, Ltd. This state-of-the-art facility is the new home of the College for Professional Studies, the Department of Disability Services, the University's radio station, and a variety of open and closed office spaces, testing, writing and tutoring centers, large conference rooms, smaller breakout rooms, a new café and dining area. Completed in February of this year, Clarke Hall incorporates sustainability features and "green" building designs and while it Regis University decided not to pursue certification, the building was designed and constructed to LEED Silver standards.

Also completed earlier this year was a new fire station for the Platte Valley Fire Protection District located in Kersey, Colorado, designed by Short Elliott Hendrickson, Inc. (SEH). This new 33,200 square foot, 2-story fire station will serve 190 square miles of incorporated and unincorporated Weld County. The building includes a day room, kitchen, six offices, nine sleeping quarters, a community room and fitness center. As one of the largest fire stations serving northern Colorado areas, this facility also includes seven vehicle bays to accommodate existing equipment and future additions of ambulances and other equipment, room for an emergency operations center, and a new 1,034 square foot metal outbuilding (or "burn building") to be used as a fire fighter training facility.

In charge of construction for the ground-up fire station, GTC's Project Manager Ryan Brenneman said, "GTC thoroughly enjoyed working with the entire project team, which included the Platte Valley fire chief, SEH, RLH Engineering and community representatives. Everyone worked together with a team approach from early design development through completion of construction, which was a great component to the success of this project."

Golden Triangle Construction (GTC) has been a general contractor in the Colorado Front Range commercial construction market since 1977 and is a proud member of the U.S. Green Building Council.
