CURRENT: Principal Design Associate at ARCH3 Associates

PREVIOUS: 1988 – 2014 Production Designer for TV Commercials and Feature Films

Production Designers are the Visual Artist/Storytellers, who in consultation primarily with the director, create and develop the overall look, atmosphere and emotion that moves the story. They are involved in the overall production design and/or selections of visual effects, lighting, set dressing and props. Production Designers are artists who adapt their style to all types of filmmaking. They are responsible for seamless design and integration of products and branding within the context of the story. Production Designers are far more than motion picture architects and engineers, the scope of their talent is limitless yet their imaginations soar within a practical and economic framework. They make seemingly impossible things possible, all the while under the pressures of time constraints and money.
