Caramel Coral Bells

Heuchera villosa 'Caramel' PP16,560

Description

A selection from Thierry Delabroye of France. Native to the Southeast U.S., this species is quite heat-tolerant, much more so than the other Heuchera species with gold or yellow foliage. New leaves emerge bright gold and deepen in color to caramel. Flowers appear later than other species as well, and are light pink.

Attributes

Height
15"

Spread
20"

Shape
Mounded

Foliage
Apricot

Fall Foliage

Exposure
Partial Shade

Zone
4-8
