

Candy
About 15 lbs of cane sugar in large bowl.
2 1/4 cup of water with 1 teaspoon of white vinegar
you can put bee health in liquid if you want.

Pour 1/2 the liquid into sugar - mix well with hands.
Pour the rest of the liquid in and mix well ---Dump into lines frame.

Line bottom of frame with tissue paper. Place block of wood about 2 X 4 at vent hole.
mix sugar candy and dump in, spread around and pat down flat.
Remove block. Let dry about 3 days on flat surface. If still little wet but stiff enough
you can put strips under and dry another day or two.

OPTION #2 - We heard of another way to make candy boards at Clay County Beekeepers meeting :

Instead of using 1/2" hardware cloth, use 1/4".

Lay the frame down on something like a paper bag open and spread out on the table

With a spray bottle spray the 1/4" wires with water then sprinkle cane granulated sugar on the moist area (thin layer) spray the layer of sugar
sprinkle more sugar, spray sprinkle - - keep doing this until you build up the candy (about 12 lbs or so)
it is suppose to dry much quicker.
