The Harvard Global Health Institute website provides infection rates per county and a four-color system to help you make informed decisions. If your county falls in the green or yellow categories, team boat rowing can be considered if appropriate monitoring, contract tracing and quarantine and/or testing protocols are in place.

If your county’s infection rate is nearing the orange category and in an upward trend, USRowing encourages all member organizations to proceed with caution and consider suspending team boat activity until the infection rate begins to decrease.
