A Demographic Transformation Like No Other

More of us are living longer, which is resulting in an unprecedented demographic shift nationwide and in our own community. The shift toward an older population brings both new challenges and new opportunities for Americans of all ages. The chart below shows the impact of increasing longevity and the aging of the baby boom generation on the demographics of our country.

Today, about 58 million Americans are 65 or older. That number increases to 72 million in 2030.

U.S. Quick Facts 65+

Life expectancy at age 65 is 20.5 more years for women and 18 more years for men.

By 2030, almost 30% of people 65+ will be minority members.
- 74% White alone
- 9% Black/African-American
- 8% Hispanic
- 5% Asian
- 3% Some other race
- .6% American Indian/Alaskan Native

Race/Ethnicity

Poverty
- 10% (5.8 million people) live below the Official Poverty Measure

% Below Poverty

Poverty
- 7% White
- 13% Asian
- 17% Black/African-American
- 18% Hispanic
- 20% American Indian/Alaskan Native

Among women age 65+, 15.5% of widows, 17% of divorced women, and 19% of never-married women live below poverty compared to 6% of married women. The highest poverty rate is among Hispanic women living alone: 36%.

Health
- 58% hypertension
- 27% diabetes
- 30% obese
- 31% arthritis
- 29% heart disease
- 11% COPD
- 68% have two or more chronic conditions.

Gender
- 55% Female
- 45% Male

Sexual Identity
Two percent of people 65+ identify as lesbian, gay or transgender.

Marital Status
- 30% of women are widowed.
- 17% divorced/separated.
  (Increased from 5% in 1980.)

Employment
- 19% working or seeking work.

Living Alone
- 27% of people live alone.
- Rises to 43% of women 75+.

Congregate Housing
- Just 2.5% of people 65+ live in nursing homes, and 1.6% reside in assisted living homes.

New York State

Our state, like the country, faces an unprecedented age shift.

By 2030, it is projected that 25% of New York State residents will be 60 or older.

Older adults are driving most of the state’s population growth. Over the decade from 2011 to 2021, the number of residents 65+ grew by 31%—an increase of 815,166 older adults. During the same period, the state’s under-65 population declined by 2.6 percent, or 444,450 people.

12% of NYS residents 65+ live in poverty.

A growing share of the state’s older adults are immigrants and people of color. 33% are non-white versus 17% in 2013.

Monroe County

In Monroe County, 25% of residents are 60+ for the first time in history.
• 65+=142,000 (19%)  • 60+=192,000 (25%)

The county’s population of older people is aging-in-place in suburban towns. The percentage of people 60 and older in many towns is over 25%.

**Gender**
- 55% Female
- 45% Male

**Marital Status**
- 33% Married
- 23% Widowed
- 20% Divorced
- 20% Never married
- Lives Alone 56%

**Race/Ethnicity**
- 58% White
- 33% Black/African-American
- 11% Hispanic
- 2% Asian
Poverty Among Older City Residents
Rochester has a poverty problem at all ages and older adults are significantly affected. The city has the second highest poverty rate in the state for older persons. According to The Center for an Urban Future’s 2023 report, the number of older persons in poverty in the city increased by an alarming 70% from 2011 to 2021.

Per the 2021, U.S. Census 1-YR Estimates, 5,451 residents 65 or older (19%) lived below the Official Poverty Measure. Per the same Census data, 8,412 residents 60 or older (21%) lived below the Official Poverty Measure.

**Issues Associated with an Older Population**

**Redefining Longevity: The Opportunities of our Longer Lives**

It has been said that demographics are destiny. If so, a once young country is undeniably growing older — but with generations of Americans who are redefining our later years.

A new study by Age Wave Inc. titled, *The New Age of Aging*, provides insights based on interviews with 2,000 older Americans. “Americans age 50+ say today’s elders today are far more active, open-minded, and curious—and far less rigid and isolated. They are eager to pursue new dreams and adventures and tear down preconceived and ageist notions of what an ‘older person’ should and could be.”

Specifically, the report says:

- The definition of “old” has been pushed back by twenty years, driven by a new breed of older adults.
- 71% of people 65+ say the best time of their life is right now or in front of them.
- We need to re-imagine purposeful roles for older adults, as 83% of adults 65+ say it’s more important to feel “useful” rather than “youthful” in their retirement years.
- There is a need and desire to better match our health spans to our lifespans.
- 59% would like to work, at least part-time, in “retirement.”

**LONGEVITY TRENDS**

1) **More childless older people/solo aging**

More people are childless than in previous generations. There are approximately 12 million solo agers in America, and an estimated 28% of older adults who live alone are childless. Childlessness is more common among the younger cohort of older adults suggesting that solo aging is a trend on the increase.

2) **More educated**

Today’s older adults are more likely to hold college degrees than previous generations, and people with higher levels of education are known to postpone retirement.

3) **Greater diversity**

As the older population becomes more diverse, racial/ethnic health disparities will play a greater role in shaping overall population health.

4) **More health concerns**

As a group, older adults today have higher rates of obesity than previous generations.
LONGEVITY ISSUES

Ageism
Ageism, which is stereotyping, prejudice and discrimination based on age, is as pervasive as it is detrimental. As noted in Dr. Tracey Gendron’s 2022 book, Aging Unmasked, “The indoctrination of ageism throughout our lives can lead to poorer physical and mental health, social isolation and loneliness, financial insecurity, decreased quality of life and even premature death.” However, Dr. Gendron also highlights that people with positive attitudes toward aging live on average seven and a half years longer than those with negative attitudes!

Making Rochester a Great Place to Age Well: The Age-friendly Initiative
Monroe County and Rochester have joined the age-friendly movement, a worldwide initiative to make our communities great places to age well. Age-friendly communities have three characteristics:

1. Age is not a significant barrier to the maintenance of lifelong interests and activities;
2. Supports and accommodations exist to enable individuals with age-related disabilities to meet basic health and social needs;
3. Opportunities exist for older adults to develop new sources of fulfillment and engagement.

Caregiving and Care Navigation
In New York State, 80% of long-term care is provided by family caregivers, not formal systems. These caregivers range in age from 25 to 95. Grandchildren care for grandparents, adult daughters and sons care for parents, and older wives and husbands care for their spouses. They cook, feed, clean, bathe, assist with mobility, drive, do laundry, buy clothes, handle finances, talk with doctors, schedule appointments, and even cope with medical tasks like injections, feeding tubes and wound treatment. Universally, caregivers need information, guidance, support, respite and other in-home services as they navigate the too-often complex community, insurance and medical systems of care.

Elder Abuse
Elder abuse is a hidden issue. Only one in 24 instances is ever reported to authorities. Elder abuse occurs in every neighborhood and income strata.
Financial exploitation (theft of money or property, accessing money without permission) is the most common form of elder abuse.

**Health and Wellness**
The importance of preventing illness and injury among older adults is growing along with the growing population of older adults. The older adult obesity rate is too high at 40%. The rate of falls, which can lead to injury and death, is too high with 25% of people 65 and older reporting at least one fall a year. To avoid overwhelming medical systems, we should invest more in evidence-based health and wellness programming which encourages healthy activity, healthy eating, and chronic disease self-care management.

Researchers believe that up to 80% of a person’s health status is due to Social Determinants of Health (SDoH) which are, “Conditions in which people are born, grow, live, work and age.” SDoH are usually factors outside of medical systems of care. These include housing conditions and access to transportation, healthy food, financial management/public benefits, socialization, and care navigation with social service connections to medical providers. In New York State, the proposed 1115 Medicaid Waiver Demonstration would, “Build a more resilient, flexible and integrated delivery system that reduces racial disparities, promotes health equity, and supports the delivery of social care.” This is a potential funding and expansion opportunity for community-based social services. Lifespan’s Community Care Connections service has proven that the integration of medical systems of care with social services improves outcomes and reduces unnecessary ED visits and hospitalizations for older patients.

**Housing**
Specialized housing for older adults is plentiful, though often expensive. Options include enriched housing, assisted living, independent living with services and family-type homes. However, many of these options are financially out of reach for lower and middle-income older adults.

**Long-term Care Workforce Shortage**
A critical shortage of paid caregivers is impacting the ability of both families and formal systems, like nursing homes and assisted living facilities, to provide adequate care or take new residents from increasingly overcrowded hospitals. New York State’s minimum staffing requirements for nursing homes went into effect in 2022, yet up to 75% of homes in New York are not providing the 3.5 hours of daily care per patient as mandated. We also face a critical shortage of geriatricians to care for the growing population of older adults.

**Medicare & Social Security**
Medicare covered about 57 million people in 2023, a number that will keep increasing. Together Medicare and Social Security accounted for 32% of
the 2022/23 federal budget. It is projected that reserves for both funds will be unable to fully pay beneficiaries sometime in the early 2030s unless the federal government takes action.

**Retirement – Finances and Fulfillment**

Just 17% of private companies offer traditional defined benefit pensions once offered by 90% of companies. The median baby boomer household had $134,000 in retirement savings in 2019, according to the most recent federal data. Some older adults need to continue working past traditional retirement age to meet their basic needs. And many older people want to continue working, at least part-time, for fulfillment. Others seek opportunities to continue contributing to the community through meaningful volunteer roles.

**Social Isolation & Loneliness**

Older adults are at greater risk of social isolation especially those elders with lower incomes and resources. “Social isolation among older adults accounts for an estimated $6.7 billion in excess Medicare spending annually... Researchers liken the effect of social isolation to smoking 15 cigarettes a day. Social connection is a significant predictor of longevity and better physical, cognitive, and mental health, while social isolation and loneliness are significant predictors of premature death and poor health.”

**Transportation**

In our community, older adults are aging in car-dependent suburban and rural locations where transportation and pedestrian infrastructure is not optimal for those who no longer drive. When older adults are considering limiting or giving up driving, their number one concern is, “What are my transportation options?”
