These tables describe how to run an improvised wilderness hex crawl. The idea is that the even the GM does not know what the players will encounter, since the map, features, and encounters are all rolled randomly at the table.

Every time the players explore a new hex, there are three primary rolls that need to be made. It works well to assign particular players to be responsible for some of these rolls to speed play- and also keep the players a part of the world creation. However the GM should always be the one to make the encounter roll.

The party should have a blank Hex Region map (Make copies of the one at the end of the document) and a 'starting point' hex. If rolling for the starting hex, roll a d8 for the row and then the column. Next roll or select a hex terrain type for their starting point- this will be important for when they begin exploring the hexes around the starting hex. (You may want to roll up a village for their starting hex using the village and town rules. This can be their safe place for buying rations and selling treasure.)

BASIC PROCEDURE

Every time the PCs explore a new adjacent hex, these three roll are made first:
» Determine the Hex Terrain type – using the table on the next page, roll a D20 and cross reference it with the hex type they just exited. This tells the type of the new hex. (There is a 50% chance that it is the same type as before)
» Roll for presence of a Feature – A d8 roll to see if the party finds something of interest in that hex. Most of this document are the tables for determining the exact nature of a feature that is found.
» Roll for Encounter – A d12 roll that answers if they encountered anyone or anything while they were exploring the hex. The encounter can happen before, after or during the discovery of a feature, (GM's choice)

Frequently a new hex's terrain will be of the same terrain type as the previous, and the party will not have any encounters or find any features. This is normal. For each hex (whether or not something is found) the party should decide if they want to move on in the same direction, or pick a new direction. The GM should note the passage of time spent in each hex, before rolling the next hex.

The GM (or better yet a designated player) should record the terrain type, and whatever feature they may have found in the region map annotations. Encounters should be rolled every time a hex is entered, even if it has been previously explored. If they party wants to spend more time exploring a hex, the GM can allow they to make another feature roll to see if they found something they missed the first time, but additional encounter rolls should also be made.

Note: be sure to track the passage of time, and the exhaustion of rations and resources. Wilderness hexcrawls are like a megadungeon, in that they are a type of challenge that requires the party to see how far they can push the odds before returning to town. If there is no penalty for exploring non-stop, then the hexcrawl will soon stop being fun for the players.

TRAVEL TIME

Crossing/exploring a hex takes a certain amount time, based on its Difficulty, usually either 3 or 4 hours. There are about 15-18 hours in the day that a party can explore before they need to camp for the night. A party that explores for MORE then 18 hours will suffer a -1 to hit rolls the following day, unless they spend extra time the following day resting. Thus a party can generally explore 5 Moderate or 4 Difficult hexes in a single day, without penalty,

FOOD

Each PC and hireling eats one days rations each day. For each day a party member does not get a full ration, their 'to hit' roll gets a -1 modifier. This is cumulative for each day they are not able to be properly fed.

Thus mark off 1 days rations for each character and hireling for after 4 or 5 hexes explored.

If the party runs out of stores, they have the following options:
» Foraging: The party as a whole may roll 1d6 once per day of exploration, and on the result of a '1' they found enough food to feed 1d6 party members for the day. (Note: they must state they are foraging at the start of the day.)
» Hunting: If the party chooses they may spend a day hunting- this is the only activity the party can make that day, and they cannot explore any new hexes. Each party member who chooses to hunt, can roll 1d6, and on the result of 1 or 2 they caught enough game for 1d6 party members.
» Ranger and Druid characters may deserve a bonus to these rolls, depending on the environment.
» Hunting or foraging in particularly bleak environments may require a negative modifier to the roll, at the GM's discretion.

2 - Wilderness Exploration

FIRST ROLL: DETERMINE THE TERRAIN
Roll a d20 to determine how the new hex changes. Tables for climates other then temperate are given
page Wilderness Exploration-6.

TEMPERATE
Mid latitudes similar to western Europe:

			PREVIOUS HEX TYPE		
ROLL 1D20:	PLAINS	FOREST	MARSH	HILLS	MOUNTAINS	WATER
1-10	Plains	Forest	Marsh	Hills	Mountains	Water
11-16	Forest	Plains	Water	Mountains	Hills	Marsh
17-18	Marsh	Hills	Forest	Water	Plains	Mountain
19	Mountains	Mountains	Plains	Forest	Forest	Plains
20	Water	Marsh	Hills	Marsh	Water	Hills

*Hex terrain type remains the same in the new hex.

SECOND ROLL: ROLL TO SEE IF THERE IS A FEATURE IN THE HEX.

FEATURE PRESENCE ROLL
A feature is anything of interest other than regular wilderness found in a hex. It can vary from a
castle of 100 orc warriors to a broken rake. When entering a hex, roll a d8. If 1 comes up, then a
feature was found. Otherwise the party found nothing unusual in their exploration. (If the party
wants to search more in this hex, They can roll again to see if they find a feature after a full day
searching.)

> OPTIONAL POPULATION DENSITY RULE
> The basic 12.5% probability assumes the PCs are exploring fairly empty wilderness. If you
> want features to be a bit more common, you can determine if the region being explored is more
> settled.

MAP OR REGION DENSITY	FEATURE PRESENCE DIE	FEATURE TYPE ROLL MODIFIER
Wilderness	D8	-1
Borderlands	D7*	±0
Settled	D6	+1

> *If you don't have D7, roll a d8, re-rolling any result of '8')

FEATURE TYPE ROLL
If a '1' was rolled on the feature presence roll, then a feature is present in the hex. Now you roll
to see what kind of feature it is. Roll 1d12 on the following chart:

> (Modified by the above modifier if using the Optional Population Density Rule.)

ROLL 1D12	TYPE OF FEATURE
1-2	Ruins & Relics
3-4	Lurid Lairs
5-6	Rivers & Roads / Islands*
7-8	Castles & Citadels
9-10	Temples & Shrines
11-12	Villages & Towns

> * If in a Water Hex, roll for an island as the feature.

See the correct Subsection for the feature type rolled.

Note: For Water Hexes, the feature is assumed on be on or near the shoreline closest to the face the
party entered from.

THIRD ROLL: RANDOM ENCOUNTERS

Every time the PCs enter a hex, (even a previously explored hex) an encounter is rolled. An encounter doesn't necessarily mean a fight, The encounter tables give the name of the who or what is encountered- see your preferred rule book for number, stats, reaction rolls, etc. The chance of an encounter depends on the hex type where it occurs:

Roll a d12 and see if an encounter occurs based on the following chart:

	HEX TYPE	RUGGEDNESS	TIME TO CROSS	--ROLL 1D12-- AN ENCOUNTER OCCURS ON:
	Plains	Moderate	3 Hours	1,2
	Forest	Moderate	3 Hours	1,2
	Hills	Moderate	3 Hours	1,2
	Mountains	Difficult	4 Hours	1,2,3
	Marsh	Difficult	4 Hours	1,2,3
	Water*	Difficult	4 Hours	1,2,3
Special:	Road**	Easy	2 Hours	1
	River downstream***	Easy	1 Hour	1,2
	River Upstream***	Difficult	4 Hours	1,2
	Desert	Moderate	3 Hours	1,2
Arid:	Thickets	Moderate	3 Hours	1,2
	Savannah	Moderate	3 Hours	1,2
	Dunes	Difficult	4 Hours	1,2,3
	Rainforest	Moderate	3 Hours	1,2
Tropical:	Swamp	Difficult	4 Hours	1,2,3
	Jungle	Difficult	4 Hours	1,2,3
	Tundra	Moderate	3 Hours	1,2
Sub Arctic:	Steppe	Moderate	3 Hours	1,2
	Glacier	Difficult	4 Hours	1,2,3

   * See Page Wilderness Exploration-7 for Dealing with Water hexes,

  ** Use the road hex travel time and encounter roll if the party is following a road through a hex.
     If they are in a hex that has a road but not travelling on it, then use the base hex type.

*** When travelling on a river without magical assistance via boat or swimming, The travel time
     depends on if they are going up stream or down stream. As with roads, if the party is in a hex
     with a river, but are not travelling on it, use the base hex type

If an encounter is indicated, roll on the correct encounter chart for that Terrain type. Note: if the dice are indicating too many encounters in a day for the party, the GM may substitute a Feature for an encounter at his/her discretion.

*Hex terrain type remains the same in the new hex.

ON HEX SIZES
Generally Hexes are 5 or 6 miles across, face to face. These rules do not require the hexes to be
any specific size, but something in that ball park is fairly realistic in terms of how topography
changes.

ADVANTAGES OF A 5-MILE HEX
» The 5-mile hex is classic, it was the original scale for hex maps.
» 5 miles per hex makes counting distance over multiple hexes quick and easy.

ADVANTAGES OF A 6-MILE HEX
» A 6 mile hex Factors into 60 and 24 well, so time-to-distance calculations come out even numbers.
» A hex 6 miles across face to face, is almost 7 miles from point to point.

DEALING WITH WITH WATER HEXES

Normally, a party on foot cannot cross a water hex, but have to exit an adjacent hex face. In the example on the right, the party (coming from the southern green explored hex into the center water hex) can then turn and exit the water hex to explore either of the white unexplored hexes that border an explored land hex. But the party cannot cut directly across the water hex to exit into an unexplored hex while exploring on foot. (Think of the water hex as a body of water, and the party walking around its edge- along the shore.) If the new hex also turns out to also be a water hex, they can continue to the next unexplored hex, as long as they still are able to move along a hex face adjacent to an explored land hex.
If the party has a small boat or other means to cross water, then the GM can allow them to cut directly across a water hex.

MARITIME EXPLORATION

If the party discovers a large coast line of water hexes, and chooses explore it using a ship or other means, the GM can use the following rules for Maritime Exploration. These rules can be used to explore an unexplored hex, if:

» The party has a ship or some other means to cross a large body of water.
» None of the hexes adjacent to the unexplored hex have been already determined to contain land.
   (i.e. the adjacent hexes can only be Unexplored, Water, or Sea Hexes.)

If a hex meets those criteria, use the following roles in place of the normal Wilderness Exploration rules for the hex:

FIRST ROLL: DETERMINE HEX TYPE

Every time a new hex is sailed into, roll 1d20. If the result is 2-20, then the hex is a Sea Hex. On the result of a '1' a new coast has been reached. Roll 1d6 for hex terrain type, and also roll on the coastal features table in the Islands section. If the party is able to land on the new coast, they may explore on foot. (The Islands section has many relevant tables for shore parties.)

SECOND ROLL: DETERMINE IF THERE IS AN ISLAND IN THE HEX.

Roll 1d10, and on the result of a '1' there is an island in the hex. Proceed to the ISLAND SUB-TABLES.

THIRD ROLL: DETERMINE IF THERE IS AN ENCOUNTER

Roll 1d12, and on the result of a '1' there was an encounter, and roll on the "WATER/SHORE (OCEAN)" encounter Table for the encounter type.

Additional rules can be used if the party is really exploring a mighty ocean. (Like wind speed and direction, Navigation errors, and switching to a larger scale hex map, etc.)

NOTE: WATER HEX VS. SEA HEX

There are two kinds of aquatic hexes. A Water hex is a lake or shallow coastal water. A Sea Hex is deep water in a large body of water like an ocean. A Water Hex can be adjacent to any kind of hex. But a Sea Hex only is adjacent to other aquatic hexes (water or sea hexes). Thus no one will know if an aquatic hex is a Water Hex or a Sea Hex, until all of its adjacent hexes have been explored. Both Water Hexes and Sea Hexes may have an Island as a hex feature.

OTHER USES FOR THESE TABLES

An improve exploration is a particular kind of beast, and requires a GM who can work and think
quickly to keep it a fun experience. But GMs can also uses these tables to add features to an
existing hex map to keep it old school random, but also something they can be prepared for.

OPTION 1:
If using a hand drawn hex map or using a mapping tool use a map that has each hex numbered, then
simply go through each land hex, and roll just the feature roll for each hex. Note the hex number
where a feature is indicated, and roll for the feature as normal

ROLL 1D10	TYPE OF FEATURE
1-2	Ruins & Relics
3-4	Lurid Lairs
5-6	Castles & Citadels
7-8	Temples & Shrines
9-10	Villages & Towns

(The map may already have rivers added, and it will make more sense to draw in any roads manually
after adding all the features.)

When running the Players through the wilderness sandbox all that needs to be rolled is the encounter
roll.

OPTION 2:
If the map already has towns and castles and temples marked, (or the GM wants to place them in
specific places) then use the relevant tables to determine the specifics of these features.

But for the remaining empty hexes, roll a D10 for feature presence, and on a '1' roll a d6 on this
following table:

ROLL 1D6	TYPE OF FEATURE
1-3	Ruins & Relics
4-6	Lurid Lairs

LURID LAIRS

Lairs are domicile of monsters in the wild. The PCs would have found it, and the monster may or may not be home, (or come back while they are there.) Each Lair type has an encounter table to roll on, if it is occupied. Roll on these tables for Lair type, and if there is an occupant.

Next Roll 1d20 and look under the Cave type, and see what type of entrance goes with that result. Then look under the result to see how to roll up the dimensions for that entrance.

EXAMPLE: if you roll a 14 on the d20 for your Limestone Cave, that means it has a Pit type entrance, and you should roll 1d6x10' for the pit diameter, and 1d8x10' for its depth.

**Probability shown is the chance that pit leads to another entrance.

***Probability shown is chance of finding a dry route. PCs attempting to swim in 50°F or colder water must save against hypothermia (roll under their CON on 1d20.) Failure results in death in 2d6 hours if dry clothes and/or heat source are not found.

†Probability show is that branch tunnel joins, instead of a four-way intersection. Roll random direction for tunnel which may also be explored

‡Tunnel ends, or cavern, vault, or lake has no exit besides PC's original entrance; rivers/streams disappear in slot. Tunnel end can be caused by impassable thicket of surface plants, esp. in tropical areas. 1d100" thick lava seal can block lava tubes, or siphon (i.e. cavern roof descends temporarily to water level.

‡‡Tunnel ending at this point assumes that cut through obstacle completed, or(or optionally, river disappears underground into limestone cave type.)

River and Roads act differently then other hex features. The assumption is that they are part of a series that connects multiple hexes. Once the first river or road hex is placed, its template will indicate the adjacent hexes it continues into. When those hexes are explored, the GM should roll for its continuation, in addition to the regular hex rolls. However there is no need to roll for orientation, since it connects to the previous hex by default. If there is some ambiguity about how a template connects, the GM should use their judgement, or roll a die.

If a template shows a river or road extending into an adjacent hex that has already been explored, then when the party follows the river or road into that hex, roll and add the template to the hex, just like it is being explored, (Hexes in the wilderness are wild places, and it would have been easy for the party to have missed a river or road on their first pass through the hex.)

A river should flow in one direction (down stream) and never connect back on itself. A road on the other hand can connect with itself, but is assumed to connect with settlements or ruins. (Although it would not be unusual to find ancient roads in the wilderness that have outlasted the locations they served.)

HEX TYPE & ORIENTATION
Roll a d12 to find whether a river or a road was found, and which face of the hex the template will be oriented toward.

```
                    NORTH

        1.                    7.
  6.          2.       12.          8.

        River                Road

  5.          3.       11.          9.
        4.                    10.
```

» If the party follows the river/road into a new hex, just the template is rolled. (Its orientation is determined by how it can connect to the segment the party followed.)
» some templates can curve left or right, depending on how they are attached. For these the GM can roll a d6 with 1-3 the road veers left from the player's POV, and 4-6 it veers right.
» If there is an obvious way the road/rive should flow, the GM can skip rolling entirely, and just dictate how the road/river looks for that hex. (i.e. If that road would connect two or more segments from other hexes, is passing near a town or other feature that would logically be connected, etc.
» If a segment template points back into an already explored hex, the GM can choose to have the road/river dead end or peter out as it enters that hex. Alternately, he can have it continue into that hex- wilderness hexes are large and wild, and it is easily possible that the party missed the river/road when they explored it the first time.

SHOP TYPES
To find the types of shops a village will have, note first the number of shops the population will
allow (see population chart). Secondly, note the technological level of the village (see VILLAGE
TECHNOLOGICAL CHART). If a village has a technological level of Tributary with a population of 200,
four village shops and two government works buildings should be rolled for.

VILLAGE SHOPS
After locating the technological level, roll a d20 on the chart in the technological level indicated.

Roll for no more than one-third of the shops in that category. The remainder shall be rolled for from
the lower technological levels.

8 - Villages & Towns

VILLAGES & TOWNS

Roll for the physical characteristics and Population of a village, and then the types of shops and services it has. Towns and cities should be custom created by the GM, and usually only appear in civilized hexes. Also any key buildings can be randomly generated.

NUMBER OF WALL SECTIONS

ROLL 1D6	WALL SECTIONS
1	2d6
2	4d6
3	6d6
4	8d6
5	10d6
6	12d6

WALL HEIGHT

To determine wall height multiply the number in parenthesis on the Wall Thickness Chart by the actual thickness. (i.e. A 8' thick Brick wall would be (4x) taller, or 32'.)

Wall length

To determine the length of each wall section multiply the wall thickness by 1d20 feet.

WALL THICKNESS AND TYPE

Roll a d6, starting with the 'Earth' column and then keep rolling if the result says to go to the next higher Wall type table.

NUMBER OF ROOMS, NUMBER OF FLOORS & ROOM TYPES.

Roll for number of rooms, and note if there are any additional floors or features. Roll for each room indicated on the Ground Level table, and then for any additional floors if indicated. (i.e. If the number of rooms roll results in "BTN+4+UL", you would roll 5 times on the Ground Level chart, and once on the Upper Level chart.)

Notes

This is a document created in support of my gaming group, and is not intended for sale. It is definitely a work in progress, and so use at your own risk. The philosophy of randomized tables like these, is that the GM is also playing a game, one that requires skill and creativity. Creating a narrative out of random results on the fly is what separates the good from the great. But as always, if the dice and tables result in something that is too boring or too brutal for your players, then use your power & creativity as the GM keep things fun.

While I created or adapted quite a bit of the content, much of the material and artwork contained within is taken directly from Judges Guild publications, without permission.

If you find these tables useful, please go purchase the original publications, since they also contain additional material I didn't utilize or change, as well as dozens pages of useful maps in each one.
