

# WOOD THAT WORKS

DAVE & MARJI ROY

SEQUENCES

© 1983

Size: 19"H x 10"W x 9"D

Limited Edition of 650

Run Time: Approximately 1½ hours.

Power Source: Brass-colored, stainless-steel spring

Description: The large "S" shaped wheel and the smaller drive wheel are mounted on a third free-spinning member. The spinning of the "S" wheel causes the entire assembly to rock about its common center eventually turning over completely. The interaction of these elements creates an unpredictable and entertaining randomness.

## DIRECTIONS FOR OPERATING SEQUENCES:

To Wind:      Locate the winding knob on the back of the sculpture.  
                    (See back view above.)

Hold the dark pivoting base steady with one hand. (See dia.)  
Turn the winding knob clockwise until it can not be turned  
anymore. Do not remove the tape attached to the spring.  
This keeps the spring from winding off of the spool.
