Kindala-Forest has 2 base pieces that must be mounted in the correct orientation.

1. Start at the location for the top hole #1 on the diagram. This will be the top hole in the top base. Make sure it has at least 13” inches of clearance above it, 24” to the right, 16” to the left and 48” below to allow room for the sculpture to move.

2. Drop a weighted string or use a level to establish a true vertical line. Measure vertically down that line from point 1 making marks at points 2, 3, and 4 at the noted distances between points. I use blue painters tape on the wall to mark upon.

3. Use a level or a square to establish a horizontal line and at each point 2-4 measuring out horizontally the distance noted and make another mark. Note some go to the right and some to the left.

4. Temporarily install the sculptures using those two points on each base. Mark the other mounting holes with the sculpture in place. The top circle base has 2 additional holes to mark. The lower base has 3 additional holes to mark. All mounting holes are marked with a blue dot on the diagram.

5. Remove the sculpture. Install the appropriate anchors and permanently remount the sculpture on the wall.

11. Add any the belts (see original instructions available online)

12. Wind only 2 turns and test.
